

**Answers to Chapter 2 Activities**

$$2.1 \quad \text{GST} = \$2,390.65 \div 23 \times 3 \\ = \$311.82$$

The GST content is \$311.82 and the GST exclusive amount is \$2,078.83 (\$2,390.65 - \$311.82).

$$2.2 \quad \text{GST} = \$308.90 \div 23 \times 3 \\ = \$40.29$$

The GST content is \$40.29 and the GST exclusive amount is \$268.61 (\$308.90 - \$40.29).

$$2.3 \quad \text{GST} = \$22,999.95 \div 23 \times 3 \\ = \$2,999.99$$

The GST content is \$2,999.99 and the GST exclusive amount is \$19,999.96 (\$22,999.95 - \$2,999.99).

$$2.4 \quad \text{GST} = \$17,545 \times 15\% \\ = \$2,631.75$$

GST of \$2,631.75 should be added to the cost of the car, which means that the GST inclusive cost of the car is \$20,176.75 (\$17,545 + \$2,631.75).

You can check this answer by dividing the GST inclusive amount by 23 and multiplying by 3 (\$20,176.75  $\div$  23  $\times$  3 = \$2,631.75). This check gives you the same GST content as you calculated above, so your calculations must be correct.

$$2.5 \quad \text{GST} = \$14.60 \times 15\% \\ = \$2.19$$

GST of \$2.19 should be added to the cost of the calculator, which means that the GST inclusive cost of the calculator is \$16.79 (\$14.60 + \$2.19).

$$2.6 \quad \text{GST} = \$245.00 \times 15\% \\ = \$36.75$$

GST of \$36.75 should be added to the cost of the television, which means that the GST inclusive cost of the television is \$281.75 (\$245 + \$36.75).

- 2.7 The main advantage to Shae in choosing to register for GST is that she could claim back the GST she incurs on all her business expenditure, including the purchase of the new equipment.

The main disadvantage is that she would have to charge her customers GST. Presumably most of Shae's customers are private consumers, and could not claim back the GST. The cost of Shae's products will therefore have to increase making her less competitive, or if she maintains prices her gross profit will decrease.

Registering for GST will also increase Shae's compliance costs.

- 2.9 Provided Rick keeps the required details he can claim \$60 GST ( $\$460 \div 23 \times 3$ ).

	<i>Payment received from Smalls Gallery</i>		

Aug 23	Bank	3,245.00	
	Sales income		2,821.74
	GST collected		423.26
	<i>Being cash sales banked</i>		

Aug 24	Accounts receivable/Smalls Gallery	1,900.00	
	Sales income		1,652.17
	GST collected		247.83
	<i>Being credit sales to Smalls Gallery</i>		

Aug 26	Drawings	100.00	
--------	----------	--------	--

Purchases	86.96
GST collected	13.04
<i>Being inventory taken for own use</i>	

There is a credit to GST here because the inventory has been taken for private use. The original claim for GST has to be in effect cancelled, in the same way as it is with returns.

Aug 29	Accounts payable/Art Supplies	400.00	
	Bank		392.00
	Discount received		6.96
	GST collected		1.04
	<i>Being payment of inventory purchased from Art Supplies</i>		

In this case there is a credit to GST on the discount received, because the total amount paid is less than what was originally recorded.

Aug 29	Motor vehicle expenses	121.74	
	GST paid	18.26	
	Bank		140.00
	<i>Being payment of petrol account</i>
