5. List the four financial statements. Explain the connection between these four statements.

ANS:

- The balance sheet (Balance Sheet)
- The income statement (Income Statement)
- The statement of changes in equity
- The statement of cash flows

Profit on the income statement increases retained earnings on the statement of changes in equity. The balance in the statement of changes in equity goes to the balance sheet. The ending balance for cash on the statement of cash flows is also shown on the balance sheet.

6. Paige Company claims that its financial information is useful. What four qualities must be present in order to have 'useful' accounting information? Explain these four qualities.

ANS:

The four qualitative characteristics of useful accounting information are relevance, reliability, comparability and consistency.

- Relevant information has the capacity to make a difference in a decision. It helps users predict future events or provides feedback.
- Reliable information is dependable, verifiable and free from bias.
- Comparability allows comparisons to be made between or among companies.
- Consistency refers to the application of the same accounting principles over time.

7. What is the difference between comparability and consistency?

ANS:

- Comparability allows comparisons to be made between or among companies. Even though a certain amount of freedom exists in selecting accounting principles, when this information is disclosed in the financial statements, users can still compare the information when they know what principle is used.
- Consistency refers to the application of the same accounting principles over time. It involves the relationships between a set of numbers over several periods, but within one company only, unlike comparability that can be between or among companies.
