Sales	\$820,000
Selling and administrative expenses	140,000
Direct materials purchases	176,000
Direct labour	200,000
Factory overhead	270,000
Direct materials, November 1	24,000
Work in process, November 1	50,000
Finished goods, November 1	46,000
Direct materials, November 30	28,000
Work in process, November 30	56,000
Finished goods, November 30	38,000

What is the net income for the month of November?

- a. \$36,000
- b. \$180,000
- c. \$636,000
- d. \$644,000

ANSWER: a

RATIONALE: SUPPORTING CALCULATIONS: COGM = $(\$24,000 + \$176,000 - \$28,000) + \$200,000 + \$270,000 + \$50,000 - \$56,000 = \$636,000$
COGS = $\$636,000 + \$46,000 - \$38,000 = \$644,000$
NI = $\$820,000 - \$140,000 - \$644,000 = \$36,000$

152. What is the difference between a period cost and a product cost?

ANSWER:

A period cost is a nonmanufacturing cost that is expensed during the current period rather than inventoried. Examples of period costs would be selling and administrative costs. A product cost is a manufacturing cost that is inventoried and later expensed as cost of goods sold only when the goods have been sold. Product costs are classified as direct materials, direct labour, or overhead.

153. Describe the purpose of the three inventory accounts used by a manufacturer.

ANSWER:

The materials inventory is used to keep track of materials that have not yet been used in production. The work-in-process inventory is used to account for the costs of goods that were partially completed at the end of the accounting period. The finished goods inventory is used to account for the cost of goods that were finished at the end of the current period but have not yet been sold.

154. List and describe the three categories of manufacturing costs.

ANSWER:

Direct materials consist of the cost of materials requisitioned and used in production during the current period. Direct materials are materials that can be accurately and conveniently traced to the product. Direct labour consists of labour costs of workers directly involved in the manufacture of the product. Overhead consists of all the manufacturing costs that do not fall into the direct material or direct labour category. Examples of overhead costs include insurance on the factory, machinery depreciation, indirect labour, indirect materials, factory supplies, etc.

155. What is the difference between total manufacturing costs and cost of goods manufactured?

ANSWER:

Total manufacturing costs would consist of the cost of materials used, the direct labour costs incurred and the overhead costs incurred during the current period. Cost of goods manufactured would be computed by adding the beginning balance of work in process to, and subtracting the ending balance of work in process from, the total manufacturing costs.

156. Explain the difference between an inventoriable cost and a non-inventoriable cost.

ANSWER:

An inventoriable cost is a cost of manufacturing the product. Inventoriable costs are also referred to as product costs and manufacturing costs. They include direct materials, direct labour, and overhead. Inventoriable costs are not expensed until the goods are sold. A non-inventoriable cost is a selling or administrative cost that is expensed immediately in the accounting period that it is incurred. Non-inventoriable costs are also referred to as period costs or non-manufacturing costs.

157. List the types of inventory accounts that a service business, retailer, and manufacturer would have in their accounting records.

ANSWER:

Service businesses would have no inventory account to record the items they would sell because they have intangible products that are not inventoried. They may have a supplies inventory account only. A retailer or merchandiser would have a merchandise inventory account recording the cost of the items they have available for resale. A manufacturer would have a raw or direct material inventory account, a WIP (work in progress) inventory account and a finished goods inventory account.
