

## Chapter 2—Markets and the Market Process

### MULTIPLE CHOICE

1. \_\_\_\_ is an example of an allocation mechanism.
- Market
  - First-come, first-served
  - Government dictate
  - Random
  - All of these are examples of allocation mechanisms.

ANS: E                    PTS: 1                    DIF: Easy  
 NAT: BPROG: Reflective Thinking                    TOP: Allocation Mechanisms  
 KEY: BLOOM'S: Knowledge

2. Which of the following exemplifies the first come, first-served allocation mechanism?
- Air travel on the Wednesday before Thanksgiving is always expensive.
  - People who purchase air tickets a week before travel pay more than people who purchase tickets two months before travel.
  - People will pay scalpers many times the face value of a ticket to the Super Bowl.
  - Customers in a crowded restaurant may slip the headwaiter some money in order to be seated more quickly.
  - People line up outside stores on Thanksgiving night for the 5:00 a.m. Black Friday (day after Thanksgiving) sale.

ANS: E                    PTS: 1                    DIF: Easy  
 NAT: BPROG: Reflective Thinking                    TOP: Allocation Mechanisms  
 KEY: BLOOM'S: Application

3. Which of the following exemplifies the market allocation mechanism?
- Prices of swim suits are marked down in September.
  - A store limits the quantity of an item that a customer can purchase.
  - Medicare (health care for the elderly).
  - Christmas decorations and merchandise in stores by Halloween.
  - All of these are examples of the market allocation mechanism.

ANS: A                    PTS: 1                    DIF: Easy  
 NAT: BPROG: Reflective Thinking                    TOP: Preview                    KEY: BLOOM'S: Application

4. Which of the following mechanisms is unfair?
- Market.
  - First-come, first-served.
  - Government
  - Random
  - All of these are unfair in a sense; it depends on the incentives each creates.

ANS: E                    PTS: 1                    DIF: Easy  
 NAT: BPROG: Reflective Thinking                    TOP: Preview                    KEY: BLOOM'S: Knowledge

5. Which of the following examples deals with price, with the allocation of goods and services, and also with demand and supply?
- Lodging in Phoenix may cost twice as much in the winter as in the summer.
  - Lodging in Colorado may cost much more in the winter than in the summer.
  - People will pay scalpers many times the face value of a ticket to a popular show.

- d. Customers in a crowded restaurant may slip the headwaiter some money in order to be seated more quickly.
- e. All of these

ANS: E                      PTS: 1                      DIF: Easy  
NAT: BPROG: Reflective Thinking                      TOP: Preview                      KEY: BLOOM'S: Application

6. Which of the following is *not* an allocation mechanism?
- a. Fairness
  - b. Markets
  - c. First come, first served
  - d. Random
  - e. Government

ANS: A                      PTS: 1                      DIF: Easy  
NAT: BPROG: Reflective Thinking                      TOP: Allocation Mechanisms  
KEY: BLOOM'S: Knowledge

7. What incentives are created under a first come, first served allocation mechanism?
- a. Fairness
  - b. Equality for all
  - c. To be first
  - d. To produce the most
  - e. To acquire purchasing ability (to obtain income and wealth)

ANS: C                      PTS: 1                      DIF: Easy  
NAT: BPROG: Reflective Thinking                      TOP: Allocation Mechanisms  
KEY: BLOOM'S: Knowledge

8. What incentives are created under a government allocation scheme?
- a. Fairness
  - b. Equality for all
  - c. To be first
  - d. To be in favor with or match up with government's rules
  - e. To acquire purchasing ability (to obtain income and wealth)

ANS: D                      PTS: 1                      DIF: Easy  
NAT: BPROG: Reflective Thinking                      TOP: Allocation Mechanisms  
KEY: BLOOM'S: Knowledge

9. What incentives are created under a random allocation scheme?
- a. Fairness
  - b. Equal results for all
  - c. To be first
  - d. To be in favor with or match up with government's rules
  - e. No incentives are created

ANS: E                      PTS: 1                      DIF: Easy  
NAT: BPROG: Reflective Thinking                      TOP: Allocation Mechanisms  
KEY: BLOOM'S: Knowledge

10. What incentives are created under a market allocation scheme?
- a. Fairness
  - b. Equality for all
  - c. To be first

- d. To be in favor with or match up with government's rules
- e. To acquire purchasing ability (to obtain income and wealth)

ANS: E                      PTS: 1                      DIF: Easy  
NAT: BPROG: Reflective Thinking                      TOP: Allocation Mechanisms  
KEY: BLOOM'S: Knowledge

11. In the long run, under which allocation mechanism will a society grow most quickly?
- a. Market
  - b. Government
  - c. First-come, first served
  - d. Random
  - e. All of these mechanisms will lead to long-run, sustained economic growth

ANS: A                      PTS: 1                      DIF: Easy  
NAT: BPROG: Reflective Thinking                      TOP: Allocation Mechanisms  
KEY: BLOOM'S: Knowledge

12. The market system results in
- a. economic growth
  - b. an increased standard of living
  - c. efficiency
  - d. motivation for sellers to improve the quality of their products
  - e. All of these result from the market system.

ANS: E                      PTS: 1                      DIF: Easy  
NAT: BPROG: Reflective Thinking                      TOP: Allocation Mechanisms  
KEY: BLOOM'S: Knowledge

13. The efficiency of an economic system is a measure of
- a. how well off people are.
  - b. how well a system satisfies people's wants and needs.
  - c. the standard of living.
  - d. inflation.
  - e. unemployment.

ANS: B                      PTS: 1                      DIF: Easy  
NAT: BPROG: Reflective Thinking                      TOP: Allocation Mechanisms  
KEY: BLOOM'S: Knowledge

14. The market system is said to be efficient because it
- a. takes fewer resources to work than any other system.
  - b. requires more labor than any other system.
  - c. determines the price.
  - d. allocates resources to who wants them.
  - e. creates fewer goods and services than other systems.

ANS: C                      PTS: 1                      DIF: Easy  
NAT: BPROG: Reflective Thinking                      TOP: Allocation Mechanisms  
KEY: BLOOM'S: Knowledge

15. For a free market to exist, economists say that
- a. the government must act in the best interest of the political leadership.
  - b. all's well that ends well.
  - c. supply must determine demand.

- d. there must be voluntary exchanges and secure private property rights.
- e. everything must have a price that is lower than competitive offerings from other countries.

ANS: D                      PTS: 1                      DIF: Moderate  
NAT: BPROG: Reflective Thinking                      TOP: Allocation Mechanisms  
KEY: BLOOM'S: Knowledge

16. When economists say that people are self-interested, they mean that people are
- a. using their scarce resources to maximize their well-being.
  - b. selfish.
  - c. greedy for other peoples' possessions.
  - d. efficiently substituting market demands for complementary goods.
  - e. reacting to shortages by creating surpluses of socially acceptable wants and needs.

ANS: A                      PTS: 1                      DIF: Moderate  
NAT: BPROG: Reflective Thinking                      TOP: Allocation Mechanisms  
KEY: BLOOM'S: Comprehension

17. Even in the United States, not all allocation is carried out in a market because, in some cases, people
- a. want more of the product.
  - b. want less of the product.
  - c. do not like the market outcome.
  - d. support the market outcome.
  - e. disagree with a random allocation.

ANS: C                      PTS: 1                      DIF: Easy  
NAT: BPROG: Reflective Thinking                      TOP: Allocation Mechanisms  
KEY: BLOOM'S: Knowledge

18. Even in the United States, not all allocation is carried out in a market because, in some cases,
- a. people want more of the product.
  - b. people want less of the product.
  - c. the market outcome is not always efficient.
  - d. people support the market outcome.
  - e. people disagree with a random allocation.

ANS: C                      PTS: 1                      DIF: Easy  
NAT: BPROG: Reflective Thinking                      TOP: Allocation Mechanisms  
KEY: BLOOM'S: Knowledge

19. The market system may not be efficient because people want more of the product. In this situation, the market
- a. is not able to account for all costs and benefits.
  - b. is always able to account for all costs and benefits.
  - c. accounts for all costs and benefits except in the case of fast food.
  - d. cannot account for the cost of Styrofoam cups.
  - e. is unable to measure the cost of cigarettes.

ANS: A                      PTS: 1                      DIF: Easy  
NAT: BPROG: Reflective Thinking                      TOP: Allocation Mechanisms  
KEY: BLOOM'S: Knowledge

20. One reason governments pay so much for military weapons is
- a. they are greedy.
  - b. they do not want a free market system for military weapons.

- c. consumers want more than the government is willing to buy.
- d. they want to pay more, assuming they will get better-quality weapons.
- e. all of these.

ANS: B                      PTS: 1                      DIF: Moderate  
NAT: BPROG: Reflective Thinking                      TOP: Allocation Mechanisms  
KEY: BLOOM'S: Comprehension

21. Why is the market system not universally relied on to allocate goods and services?
- a. Government wants to impose its preferences.
  - b. People do not like the outcome.
  - c. The market simply cannot function.
  - d. The market system is not always the most efficient allocation mechanism.
  - e. All of these.

ANS: E                      PTS: 1                      DIF: Moderate  
NAT: BPROG: Reflective Thinking                      TOP: Allocation Mechanisms  
KEY: BLOOM'S: Knowledge

22. An example of the market allocation mechanism is
- a. The 50% off sale on Christmas items on December 26.
  - b. A one-pound box of See's candy selling for US \$40 in Hong Kong.
  - c. Discounted matinee movie tickets
  - d. Buyers paying more than the suggested retail price for a Mazda Miata when they were introduced in the U.S. in 1990.
  - e. All of these are examples of the market mechanism.

ANS: E                      PTS: 1                      DIF: Moderate  
NAT: BPROG: Reflective Thinking                      TOP: How Markets Function  
KEY: BLOOM'S: Application

23. The following is an example of the market allocation mechanism
- a. Long lines of people waiting to purchase the new Apple iPad
  - b. The raffle drawing for a trip to Hawaii
  - c. The American interstate freeway system
  - d. The \$5 pizza special at the nearby-campus pizzeria
  - e. None of these is an example of the market allocation mechanism.

ANS: D                      PTS: 1                      DIF: Moderate  
NAT: BPROG: Reflective Thinking                      TOP: Allocation Mechanisms  
KEY: BLOOM'S: Application

24. The following is an example of the first-come, first-served allocation mechanism
- a. Long lines of people waiting to purchase the new Apple iPad
  - b. The raffle drawing for a trip to Hawaii
  - c. The American interstate freeway system
  - d. The \$5 pizza special at the nearby-campus pizzeria
  - e. None of these is an example of the market allocation mechanism.

ANS: A                      PTS: 1                      DIF: Moderate  
NAT: BPROG: Reflective Thinking                      TOP: Allocation Mechanisms  
KEY: BLOOM'S: Application

25. The following is an example of the random allocation mechanism
- a. Long lines of people waiting to purchase the new Apple iPad

- b. The raffle drawing for a trip to Hawaii
- c. The American interstate freeway system
- d. The \$5 pizza special at the nearby-campus pizzeria
- e. None of these is an example of the market allocation mechanism.

ANS: B                      PTS: 1                      DIF: Easy  
NAT: BPROG: Reflective Thinking                      TOP: Allocation Mechanisms  
KEY: BLOOM'S: Application

26. A market
- a. makes possible the exchange of goods and services between buyers and sellers.
  - b. refers only to a specialized place or service where goods and services are exchanged.
  - c. refers only to a formally organized place where a well-defined commodity is always traded.
  - d. refers only to a localized place or service that facilitates the exchange of goods and services.
  - e. refers to both large and small places where poorly defined commodities are traded.

ANS: A                      PTS: 1                      DIF: Easy  
NAT: BPROG: Reflective Thinking                      TOP: How Markets Function  
KEY: BLOOM'S: Knowledge

27. Which of the following statements concerning markets is *false*?
- a. Buyers and sellers communicate with each other directly or indirectly about the quality and quantity of the product.
  - b. Buyers and sellers discuss, either face to face or through an agent or broker, what they are willing to pay and receive for a good or service.
  - c. Black markets deal with exchanges that violate the law.
  - d. Markets are always formally organized, like the stock market.
  - e. *Underground market* is the term given to unrecorded transactions, whether legal or illegal.

ANS: D                      PTS: 1                      DIF: Easy  
NAT: BPROG: Reflective Thinking                      TOP: How Markets Function  
KEY: BLOOM'S: Knowledge

28. Which of the following is an example of a market?
- a. The exchange of votes and benefits by voters and politicians
  - b. The exchange of shares of stock
  - c. Sales and purchases of illegal drugs
  - d. The exchange of a particular good at many different locations
  - e. All of these

ANS: E                      PTS: 1                      DIF: Moderate  
NAT: BPROG: Reflective Thinking                      TOP: How Markets Function  
KEY: BLOOM'S: Knowledge

29. Which of the following goods are bought and sold in a market?
- a. Food
  - b. Stocks
  - c. Foreign goods
  - d. Drugs
  - e. All of these

ANS: E                      PTS: 1                      DIF: Easy  
NAT: BPROG: Reflective Thinking                      TOP: How Markets Function

KEY: BLOOM'S: Knowledge

30. Markets
- must be specialized.
  - must be general.
  - must consist of one buyer and one seller.
  - must consist of many buyers and many sellers.
  - can be organized either loosely or formally.

ANS: E                      PTS: 1                      DIF: Easy  
NAT: BPROG: Reflective Thinking                      TOP: How Markets Function  
KEY: BLOOM'S: Knowledge

31. In general, the purpose of markets is to
- facilitate the exchange of goods and services between buyers and sellers.
  - provide a means for illegal transactions.
  - provide a forum for the exchange of political benefits.
  - provide a means for unrecorded payments.
  - facilitate the exchange of illegal commodities.

ANS: A                      PTS: 1                      DIF: Moderate  
NAT: BPROG: Reflective Thinking                      TOP: How Markets Function  
KEY: BLOOM'S: Knowledge

32. The market process tends to ensure that
- consumers get the products firms want to sell them.
  - consumers get the products they want.
  - producers get the products they want.
  - consumers are not left out.
  - inefficiency exists.

ANS: B                      PTS: 1                      DIF: Easy  
NAT: BPROG: Reflective Thinking                      TOP: How Markets Function  
KEY: BLOOM'S: Knowledge

33. What does the market process refer to?
- The trading, buying, and selling of goods, services, and resources
  - Barter exchange only
  - Money exchange only
  - The process of allocating goods fairly
  - The process of ensuring that supermarkets exist

ANS: A                      PTS: 1                      DIF: Easy  
NAT: BPROG: Reflective Thinking                      TOP: How Markets Function  
KEY: BLOOM'S: Knowledge

34. Which of the following is *not* a likely result in a market system?
- Consumers increase their marginal profit.
  - Prices tend to be low.
  - Resources tend to be used where they are most valued.
  - Inefficient firms do not last.
  - Inefficiency does not last.

ANS: A                      PTS: 1                      DIF: Easy  
NAT: BPROG: Reflective Thinking                      TOP: How Markets Function

KEY: BLOOM'S: Knowledge

35. According to the law of demand, if the price of compact disks decreased, everything else held constant, the
- demand for compact disks would increase.
  - quantity demanded of compact disks would decrease.
  - quantity demanded of compact disks would increase.
  - demand for compact disks would decrease.
  - quantity demanded of compact disks would not change.

ANS: C                      PTS: 1                      DIF: Moderate  
NAT: BPROG: Reflective Thinking                      TOP: Demand                      KEY: BLOOM'S: Comprehension

36. The law of demand illustrates that
- as price decreases, demand increases.
  - price changes are always in the same direction as demand changes.
  - as price increases, quantity demanded increases.
  - as price decreases, quantity supplied increases.
  - as price decreases, quantity demanded increases.

ANS: E                      PTS: 1                      DIF: Easy  
NAT: BPROG: Reflective Thinking                      TOP: Demand                      KEY: BLOOM'S: Knowledge

37. According to the law of demand,
- the lower the price of a commodity, the lower the quantity demanded of that commodity.
  - as the price of a commodity increases, the quantity demanded of that commodity also increases.
  - the lower the price of a commodity, the greater the quantity demanded of that commodity.
  - the lower the price of a commodity, the greater the quantity supplied of that commodity.
  - as the price of a commodity increases, the quantity supplied of that commodity decreases.

ANS: C                      PTS: 1                      DIF: Easy  
NAT: BPROG: Reflective Thinking                      TOP: Demand                      KEY: BLOOM'S: Knowledge

38. Which of the following is *not* held constant when constructing a demand curve for good X?
- Consumer income
  - Consumer tastes
  - Price of good X
  - Prices of other goods
  - Consumer expectations

ANS: C                      PTS: 1                      DIF: Challenging  
NAT: BPROG: Reflective Thinking                      TOP: Demand                      KEY: BLOOM'S: Comprehension

39. An individual demand schedule or curve shows the various quantities of a good that a person
- wants and is able to purchase at alternative prices, everything else held the same.
  - has purchased at alternative prices, everything else held the same.
  - is able to purchase at alternative prices, everything else held the same.
  - is able to purchase at alternative income levels, everything else held the same.
  - has purchased at alternative income levels, everything else held the same.

ANS: A                      PTS: 1                      DIF: Easy  
NAT: BPROG: Reflective Thinking                      TOP: Demand                      KEY: BLOOM'S: Knowledge

40. A table or list of the prices and the corresponding quantities demanded of a particular good is called a

- a. demand curve.
- b. demand schedule.
- c. supply curve.
- d. supply schedule.
- e. production possibilities schedule.

ANS: B                      PTS: 1                      DIF: Easy  
 NAT: BPROG: Reflective Thinking                      TOP: Demand                      KEY: BLOOM'S: Knowledge

41. Which of the following is *not* constant along an individual consumer's demand curve for Coke?
- a. The price of Coke
  - b. The price of Pepsi
  - c. The consumer's income
  - d. The consumer's tastes
  - e. All of these

ANS: A                      PTS: 1                      DIF: Moderate  
 NAT: BPROG: Reflective Thinking                      TOP: Demand                      KEY: BLOOM'S: Application

**Table 2.1**

<b>Table 2.1</b>			
<b>Price of CD</b>	<b>Quantities of Compact Disks (CDs) Demanded</b>		
	<b>Maria<sup>1</sup></b>	<b>Abdul<sup>1</sup></b>	<b>Jorgen<sup>1</sup></b>
\$14	20	20	15
\$12	30	50	17
\$10	40	70	24
\$ 8	50	90	36
\$ 6	60	110	58

<sup>1</sup> Maria, Abdul, and Jorgen are the only consumers.

42. According to the data in Table 2.1, the market quantity of compact disks demanded at a price of \$8 is
- a. 176.
  - b. 36.
  - c. 92.
  - d. 50.
  - e. 90.

ANS: A                      PTS: 1                      DIF: Easy                      NAT: BPROG: Analytic  
 TOP: Demand                      KEY: BLOOM'S: Application

43. Refer to Table 2.1. The market demand schedule is given by what quantities corresponding to \$14, \$12, \$10, \$8, and \$6?
- a. 228, 176, 134, 97, 65
  - b. 15, 17, 24, 36, 58
  - c. 55, 97, 134, 176, 228
  - d. 20, 30, 40, 50, 60
  - e. 50, 80, 110, 140, 170

ANS: C                      PTS: 1                      DIF: Moderate                      NAT: BPROG: Analytic  
 TOP: Demand                      KEY: BLOOM'S: Application

44. Refer to Table 2.1. If Maria and Jorgen are the only consumers in the market, the market demand schedule would be given by what quantities corresponding to \$14, \$12, \$10, \$8, and \$6?
- a. 40, 80, 110, 140, 170

- b. 35, 67, 94, 126, 168
- c. 170, 140, 110, 80, 50
- d. 35, 47, 64, 86, 118
- e. 30, 50, 70, 90, 110

ANS: D                      PTS: 1                      DIF: Moderate                      NAT: BPROG: Analytic  
TOP: Demand                      KEY: BLOOM'S: Application

45. The market demand curve, with price on the vertical axis and quantity on the horizontal axis, is determined by
- a. adding individual demand curves in a horizontal direction.
  - b. adding individual demand curves in a vertical direction.
  - c. subtracting the demand for the product from the supply of the product.
  - d. adding the demand for the product and the supply of the product.
  - e. subtracting supply from demand at each price.

ANS: A                      PTS: 1                      DIF: Moderate                      NAT: BPROG: Reflective Thinking  
TOP: Demand                      KEY: BLOOM'S: Knowledge

46. A boycott of lettuce would, if effective, cause a(n)
- a. increase in the equilibrium quantity of lettuce bought and sold.
  - b. increase in the price of lettuce.
  - c. decrease in the demand for lettuce.
  - d. decrease in the supply of lettuce.
  - e. decrease in the demand for and the supply of lettuce.

ANS: C                      PTS: 1                      DIF: Moderate                      NAT: BPROG: Analytic  
TOP: Demand                      KEY: BLOOM'S: Application

47. If the population doubles in size, what can be expected to happen to the market for automobiles?
- a. Automobile manufacturers will decrease supply.
  - b. The price of automobiles will decrease.
  - c. More automobiles will be sold at any given price.
  - d. People will use fewer automobiles.
  - e. None of these

ANS: C                      PTS: 1                      DIF: Moderate                      NAT: BPROG: Analytic  
TOP: Demand                      KEY: BLOOM'S: Application

48. If everyone expects the price of almonds to rise in the near future, what will happen to the market for almonds?
- a. People will buy the same amount now.
  - b. People will buy less now, causing a decrease in demand.
  - c. The amount bought and sold today will increase.
  - d. The supply will increase today.
  - e. The amount bought and sold today will decrease.

ANS: C                      PTS: 1                      DIF: Moderate                      NAT: BPROG: Analytic  
TOP: Demand                      KEY: BLOOM'S: Application

49. Which of the following would *not* shift the demand curve for golf balls?
- a. An increase in the price of golf clubs
  - b. A decrease in the popularity of golf
  - c. An increase in the number of golfers
  - d. All of these would shift the demand curve for golf balls

e. A decrease in the price of golf balls

ANS: E                      PTS: 1                      DIF: Moderate                      NAT: BPROG: Analytic  
TOP: Demand                      KEY: BLOOM'S: Application

50. A decrease in the price of a product causes
- demand to increase.
  - the demand curve to shift to the left.
  - movement down along the demand curve.
  - movement up along the demand curve.
  - none of these.

ANS: C                      PTS: 1                      DIF: Moderate                      NAT: BPROG: Analytic  
TOP: Demand                      KEY: BLOOM'S: Application

51. Assume the demand for watermelons is downward sloping. An increase in price from \$1 per pound to \$2 per pound
- could have been caused by an increase in supply.
  - will cause a larger quantity of watermelons to be demanded.
  - will cause demand to decrease.
  - could have been caused by an extra-large crop yield.
  - will cause a smaller quantity of watermelons to be demanded.

ANS: E                      PTS: 1                      DIF: Moderate                      NAT: BPROG: Analytic  
TOP: Demand                      KEY: BLOOM'S: Application

52. Which of the following will *not* cause the demand for ice cream to change?
- A change in population size
  - A change in the price of ice cream
  - All of these would cause a change in the demand for ice cream.
  - A change in consumer preferences
  - A change in consumer incomes

ANS: B                      PTS: 1                      DIF: Challenging                      NAT: BPROG: Analytic  
TOP: Demand                      KEY: BLOOM'S: Application

53. When economists say that the demand for a product has increased, they mean that
- consumers are willing and able to purchase more at any given price.
  - the demand curve has shifted to the left.
  - the product has become more scarce and consumers therefore want it more.
  - consumers would be willing and able to pay less to receive the same quantity.
  - the price has decreased and consumers will therefore purchase more of the product.

ANS: A                      PTS: 1                      DIF: Moderate                      NAT: BPROG: Analytic  
TOP: Demand                      KEY: BLOOM'S: Comprehension

54. Which of the following will *not* cause a change in demand?
- Changes in income
  - Changes in tastes and preferences
  - Changes in the price of the product
  - Changes in the number of buyers
  - Changes in the prices of related goods and services

ANS: C                      PTS: 1                      DIF: Moderate                      NAT: BPROG: Analytic  
TOP: Demand                      KEY: BLOOM'S: Comprehension

55. Which of the following may cause a change in demand for a product?

- a. A change in the profitability of producing another product
- b. A decrease in the cost of producing the product
- c. A change in consumer incomes
- d. A change in the price of the product
- e. A change in the plans of producers

ANS: C                      PTS: 1                      DIF: Moderate                      NAT: BPROG: Analytic  
TOP: Demand                      KEY: BLOOM'S: Application

56. Which of the following statements is *true*?

- a. An increase in demand always means the same as an increase in quantity demanded.
- b. Price and quantity demanded are positively related.
- c. An increase in quantity demanded means a movement along a given demand curve.
- d. An increase in demand means a movement along a given demand curve.
- e. An increase in demand means that consumers will purchase less of a product at each possible price.
