2. What is the difference between the standard deduction and itemized deductions?

ANS:

The standard deduction is a flat amount, varying based on a taxpayer's filing status (single, married, head of household, etc.), age, and vision, which is deducted from adjusted gross income (AGI) along with a taxpayer's exemptions to arrive at taxable income.

Itemized deductions are expenses paid by a taxpayer including medical expenses (over the 10 percent of AGI limit), various taxes, home mortgage interest and investment interest, charitable contributions, personal casualty losses and miscellaneous deductions (over the 2 percent of AGI limit). If the total itemized deductions are larger than the taxpayer's standard deduction the taxpayer should complete Schedule A, listing all itemized deductions, and use this amount instead of the standard deduction. By itemizing deductions when they are larger than the standard deduction, taxpayers may reduce their taxable income and pay less tax.
