## Chapter 2

## Building Blocks of Managerial Accounting

## Quick Check Questions

## Answers:

QC2-7. b
QC2-9. b
QC2-2. b
QC2-4. b

QC2-8. d

## Short Exercises

ABC Co. is a manufacturer, because it has three kinds of inventory: Raw Materials Inventory, Work in Process Inventory, and Finished Goods Inventory.

DEF Co. is a merchandiser, because it has a single inventory account.
GHI Co. is a service company, because it has no inventory.
(10 min.) S 2-2
a. Direct materials are stored in raw materials inventory.
b. Kmart is a merchandising company.
c. Manufacturers sell from the ir stock of finished goods inventory.
d. Labor costs usually account for the highest percentage of service companies' costs.
e. Partially comple ted units are kept in the work in process inventory.
f. Service companies generally have no inventory.
g. Intel is a manufacturing company.
h. Merchandisers' inventory consists of the cost of merchandise and freight in.
i. Manufacturing companies carry three types of inventories: raw materials inventory, work in process inventory, and finished goods inventory.

H\&R Block is a service company.
k. Two types of merchandising companies include retailers and wholesalers.
a. Production
b. Customer service
c. Dis tribution
d. Research and Development (R\&D)
e. Marketing
f. Research and Development (R\&D)
g. Production
h. Design
i. Dis tribution
j. Production
(10 min.) S 2-4
a. direct; trace
b. indirect; allocate
c. direct; trace
d. direct; trace
e. direct; trace
f. indirect; allocate
g. direct; trace
h. indirect; allocate
(5-10 min.) S 2-5
a. Inventoriable product cost
b. Inventoriable product cost
c. Period cost
d. Period cost
e. Inventoriable product cost
f. Inventoriable product cost
g. Period cost
h. Inventoriable product cost
i. Period cost
(5-10 min.) S 2-6

| COST | Period Cost or <br> Inventoriable <br> Product Cost? | If an Inventoriable <br> Product Cost: Is it <br> DM, DL, or MOH? |
| :--- | :--- | :--- |
| a. Wages and be nefits paid to assembly-line workers in <br> the manufacturing plant | Product | DL |
| b. Repairs and maintenance on factory equipment | Product | MOH |
| c. Lease payment on administrative headquarters | Period |  |
| d. S alaries paid to quality control inspectors in the plant | Product | MOH |
| e. Property insurance $-40 \%$ of building is used for sales <br> and administration; $60 \%$ of building is used for <br> manufacturing | $40 \%$ Period; | - |
| f. Standard packaging materials used to package <br> individual units of product for sale (e.g., cereal boxes in <br> which cereal is packaged) | Product | MOH |
| g. Depreciation on automated production equipment | Product | DM |
| h. Telephone bills relating to customer service call center | Period |  |

(5-10 min.)

| COST | Period Cost or Inventoriable Product Cost? | If an Inventoriable Product Cost: Is it DM, DL, or MOH? |
| :---: | :---: | :---: |
| 1. Company president's annual bonus | Period |  |
| 2. Plastic gallon containers in which milk is packaged | Product | DM |
| 3. Depreciation on marketing department's computers | Period (marketing element of value chain) |  |
| 4. Wages and salaries paid to machine operators at dairy processing plant | Product | DL |
| 5. Research and Development on improving milk pasteurization process | Period (R\&D element of value chain) |  |
| 6. Cost of milk purchased from dairy farmers | Product | DM |
| 7. Lubricants used in running bottling machines | Product | MOH |
| 8. Depreciation on refrigerated trucks used to collect raw milk from dairy farms | Product | MOH (part of the cost of acquiring DM) |
| 9. Property tax on dairy processing plant | Product | MOH |
| 10. Television advertisements for DairyPlains' products | Period |  |
| 11. Gasoline used to operate refrigerated trucks used to deliver finished dairy products to grocery stores | Period (dis tribution element of value chain) |  |

(5 min.) S 2-8

| Frame Pro's |  |
| :--- | :---: |
| Total Manufacturing Overhead Computation |  |
|  |  |
| Manufacturing overhead: |  |
| Glue for picture frames* | $\$ \quad 450$ |
| Plant depreciation expense | 8,100 |
| Plant supervisor's salary | 3,300 |
| Plant janitor's salary | 1,500 |
| Oil for manufacturing equipment | 110 |
| Total manufacturing overhead | $\underline{\$ 13,460}$ |

*Assuming that it is not cost-effective to trace the low-cost glue to individual frames.
The following explanation is provided for instructional purposes, but it is not required.
Depreciation on company cars used by the sales force is a marketing expense, interest expense is a financing expense, and the company president's salary is an administrative expense. None of these expenses is incurred in the manufacturing plant, so they are not part of manufacturing overhead.

The wood for frames is a direct material, not part of manufacturing overhead.

| Retailer |  |  |
| :--- | ---: | ---: |
| Cost of Goods Sold Computation |  |  |
| Cost of goods sold: |  |  |
| Beginning inventory |  | $\$ 4,200$ |
| Purchases | $\$ 42,000$ |  |
| Import duties | 1,100 |  |
| Freight-in | 3,600 | $\underline{46,700}$ |
| Cost of goods available for sale |  | 50,900 |
| Ending inventory |  | $\underline{(5,400})$ |
| Cost of goods sold |  | $\underline{\$ 45,500}$ |

(5-10 min.) S 2-10

| Gossamer Secrets |  |  |
| :--- | ---: | ---: |
| Income Statement |  |  |
| Sales revenue |  |  |
| Cost of goods sold: |  | $\$ 39,330,000$ |
| Beginning inventory | $\$ 3,350,000$ |  |
| Purchases | $\underline{23,975,000}$ |  |

(10 min.) S 2-13

Relevant quantitative information might include:

- Difference in benefits
- Difference in costs of food
- Difference in salaries
- Difference in costs of trans portation
- Difference in costs of housing

Rele vant qualitative information might include:

- Difference in job description
- Difference in lifestyle
- Difference in future career development opportunities
- Proximity to family and friends
- Difference in weather

Relevant information always pertains to the future and differs between alternatives.

Student responses may vary.
(10 min.) S 2-14
a) variable in most cases. In some cases, consumers are charged a flat monthly fee for water hook-up (fixed portion of the bill), plus a fee for the amount of water used (variable portion of the bill). In such cases, the monthly water bill would be a mixed cost.
b) fixed or variable, depending on the cell phone plan. Plans that offer a set monthly fee for virtually unlimited minutes are fixed because the cost stays constant over a wide range of minutes. Plans that charge a specified rate per minute are variable.
c) fixed
d) usually variable; fixed in some cities offering unlimited use with monthly passes.
e) fixed
f) fixed
g) variable

## Exercises (Group A)

a. Wholesalers buy products in build from producers, mark them up, and resell them to retailers.
b. Most for-profit organizations can be described as being in one (or more) of three categories: merchandising, service, and manufacturing.
c. Honda Motors converts raw materials inventory into finished products.
d. Inventory (merchandise) for a company such as Staples includes all of the costs necessary to purchase products and get them onto the store shelves.
e. Land's End, Sears Roebuck \& Co., and LL Bean are all examples of merchandising companies.
f. An insurance company, a health care provider, and a bank are all examples of service companies.
g. Work in process inventory is composed of goods partially through the manufacturing process (not finished yet).
h. Manufacturing companies re port three types of inventory on a balance sheet.
i. Service companies typically do not have an inventory account.
(10-15 min.) E 2-16A
Reqs. 1 and 2

| Radio Shack |  |  |  |  |  |  |

## Req. 4

Total inventoriable product costs:

> Direct materials
> \$ 68
> Direct labor.................................................. 12
> Manufacturing overhead................................. $\quad 70$
> Total inventoriable product cost..................... $\underline{\underline{\$ 150}}$
> The total prime cost is:
> Direct materials.
> \$ 68
> Direct labor.

Req. 5

Req. 6
The total conversion cost is:
Direct labor. ..... \$ 12
Manufacturing overhead. ..... 70$\$ 82$
a. $R \& D$
b. Purchasing
c. Marketing
d. Dis tributing
e. Customer service
f. Design
(5-10 min.) E 2-19A

| Cost | Direct or Indirect <br> cost? |
| :--- | :--- |
| a. Manager of Juniors department | Direct |
| b. Cost of Juniors clothing | Direct |
| c. Cost of radio advertis ing for the store | Indirect |
| d. Cost of bags used to package customer purchases at the main registers <br> for the store | Indirect |
| e. Juniors department sales clerks | Direct |
| f. Electricity for the building | Indirect |
| g. Depreciation of the building | Indirect |
| h. Cost of hangers used to dis play the clothing in the store | Indirect |
| i. The Medina Kohl's store manager's salary | Indirect |
| j. Juniors clothing buyers' salaries (these buyers buy for all Juniors <br> departments of Kohl's stores) | Indirect |
| k. Cost of costume jewelry on the mannequins in the Juniors department | Direct |
| l. Cost of security staff at the Medina store | Indirect |

( 10 min.) E 2-20A
a. Company-paid fringe benefits may include health insurance, retirement plan contributions, payroll taxes, and paid vacations.
b. Conversion costs are the costs of transforming direct materials into finished goods.
c. Direct material plus direct labor equals prime costs.
d. The allocation process results into a less precise cost figure being assigned to the cost objects.
e. Total costs include the costs of all resources used throughout the value chain.
f. Inventoriable product costs are initially treated as assets on the balance sheet.
g. Steel, tires, engines, upholstery, carpet, and dashboard instruments are used in the assembly of a car. Since the manufacturer can trace the cost of these materials (including freight-in and import duties) to specific units or batches of vehicles, they are considered direct costs of the vehicles.
h. Indirect costs cannot be directly traced to a(n) cost object.
i. Costs that can be traced directly to $a(n)$ cost object are called direct costs .
j. When manufacturing companies sell the ir finished products, the costs of those finished products are removed from inventory and expensed as cost of goods sold.
k. Period costs include R\&D, marketing, dis tribution, and customer service costs.

1. GAAP requires companies to use only inventoriable product costs for external financial re porting.

| Ending finished goods inventory | 257,500 |
| Cost of goods sold | $\underline{(28,000})$ |

*From schedule of cost of goods manufactured.
(continues E 2-25A) (15-20 min.) E 2-26A

| Quality Aquatic Company |  |  |
| :---: | :---: | :---: |
| Income Statement |  |  |
| For Last Year |  |  |
| Sales revenue ( $32,000 \times \$ 12$ ) |  | \$462,000 |
| Cost of goods sold: |  |  |
| Beginning finished goods inventory | \$ 22,000 |  |
| Cost of goods manufactured |  |  |
| (E 2-25A) | 235,500 |  |
| Cost of goods available for sale | 257,500 |  |
| Ending finished goods inventory | (28,000) |  |
| Cost of goods sold |  | 229,500 |
| Gross profit |  | 232,500 |
| Operating expenses: |  |  |
| Marketing expenses | \$ 83,000 |  |
| General and adminis trative expenses | 26,500 | 109,500 |
| Operating income |  | \$ 123,000 |

Students may simply use the $\$ 229,500$ cost of goods sold computation from E $2-25 \mathrm{~A}$, rather than repeating the details of the computation here.
(25 min.) E 2-27A

Instructional note: This is a fairly challenging exercise that requires students to work backwards through financial statement elements.
a.

| Revenues | $\$ 27,300$ |
| :--- | ---: |
| Cost of goods sold | $\underline{15,000}$ |
| Gross profit | $\$ 12,700$ |

b.

To determine beginning raw materials inventory, start with the materials used computation and work backwards:

| Beginning raw materials inventory | $\$ 2,000$ |
| :--- | ---: |
| Purchases of direct materials | 9,200 |
| Available for use | 11,000 |
| Ending raw materials inventory | $\underline{(3,300)}$ |
| Direct materials used | $\underline{\underline{~ 8,000}}$ |

c.

To determine ending finished goods inventory, start by computing the cost of goods manufactured:

| Beginning work in process inventory |  | 0 |
| :--- | ---: | ---: |
| Direct materials used | $\$ 8,000$ |  |
| Direct labor | 3,100 |  |
| Manufacturing overhead | $\underline{6,300}$ | $\underline{17,400}$ |
| Total manufacturing costs to account for |  | 17,400 |
| Ending work in process inventory |  | $\underline{(1,800})$ |
| Cost of goods manufactured |  | $\underline{\$ 15,600}$ |

Now use the cost of goods sold computation to determine ending finished goods inventory:

| Beginning finis he d goods inventory | $\$ 4,200$ |
| :--- | :---: |
| Cost of goods manufactured (from above) | $\underline{15,600}$ |
| Cost of goods a vailable for sale | 19,800 |
| Ending finished goods inventory | $\underline{(5,200)}$ |
| Cost of goods sold (from part A) | $\underline{\$ 14,600}$ |

(15-20 min.) E 2-28A

| a. The type of fuel (gas or diesel) used by delivery vans, when deciding which make and model of van to purchase for the company's delivery van fleet. | Rele vant - the type of gas used by the delivery vans will affect the cost of operating the vans in the future. |
| :---: | :---: |
| b. Depreciation expense on old manufacturing equipment when deciding whether or not to replace it with ne wer equipment. | Irrele vant-depreciation expense is simply the paper write-off (expensing) of a sunk cost. Also, the remaining net book value of the equipment will need to be expensed regardless of whether the equipment is replaced. |
| c. The fair market value of old manufacturing equipment when deciding whether or not to replace it with newer equipment. | Rele vant - the fair market value is the amount of money the company could expect to receive from selling the old equipment if they decide to replace it with newer equipment. |
| d. The interest rate paid on invested funds, when deciding how much inventory to keep onhand. | Rele vant - funds tied up in inventory cannot earn interest. The higher the interest rate, the more likely the company will want to decrease inventory le vels and invest the extra funds. |
| e. The cost of land purchased 3 years ago, when deciding whether to build on the land now or wait two more years before building. | Irre le vant - the cost of the land is a sunk cost whether the company builds on the land now, or in the future. |
| f. The total amount of the restaurant's fixed costs, when deciding whether to add additional items to the menu.z | Most likely irre le vant - unless the additional ite ms will require the restaurant to purchase additional kitchen equipment, the total fixed cost will probably not change. |
| g. Cost of operating automated production machinery versus the cost of direct labor, when deciding whe ther to automate production. | Rele vant - the cost of employing labor versus automating production will likely differ. |
| h. Cost of computers purchased 6 months ago, when deciding whether to upgrade to computers with faster processing speed. | Irre le vant - the cost of the computers, which were purchased in the past, is a sunk cost. |
| i. Cost of purchasing packaging materials from an outside vendor, when deciding whether to continue manufacturing the packaging materials | Rele vant - the cost is rele vant if it differs between outsourcing and making the materials in-house. |

| in-house. |  |
| :--- | :--- | :--- |
| j. The property tax rates in different locales, <br> when deciding where to locate the company's <br> headquarters. | Relevant - the company will incur different property <br> taxes depending on where they locate. |

(10 min.) E2-29A
a. In the long-run, most costs are controllable, meaning that management is able to influence or change the amount of the cost.
b. Gasoline is one of many variable costs in the operation of a motor vehicle.
c. Within the relevant range, fixed costs do not change in total with changes in product volume.
d. Costs that differ between alternatives are called differential costs.
e. The average cost per unit declines as a production facility produces more units.
f. A marginal cost is the cost of making one more unit.
g. A product's fixed costs and variable costs, not the product's average cost, should be used to forecast total costs at different production volumes.
h. Sunk costs are costs that have already been incurred.
(10 min.) E 2-30A

| COST | Variable or Fixed |
| :--- | :--- |
| a. Shipping costs for Amazon.com | Variable |
| b. Cost of fuel used for a national trucking company | Variable |
| c. Sales commiss ions at a car de alership | Variable |
| d. Cost of fabric used at a clothing manufacturer | Variable |
| e. Monthly office le ase costs for a CPA firm | Fixed |
| f. Cost of fruit sold at a grocery store | Variable |
| g. Cost of coffee used at a Starbucks store | Variable |
| h. Monthly rent for a nail salon | Fixed |
| i. Depreciation of exercise equipment at the YMCA | Fixed |
| j. Hourly wages paid to sales clerks at Best Buy | Variable |
| k. Property taxes for a restaurant | Fixed |
| l. Monthly insurance costs for the home office of a company | Variable |
| m. Monthly flower costs for a florist | Fixed |
| n. Monthly depreciation of equipment for a customer service office | Variable |
| o. Monthly cost of French fries at a McDonald's restaurant |  |

| 1) | Variable costs | = | 20,000,000 units $\times \$ 1 /$ unit | $=$ | \$60,000,000 |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | $+\underline{\text { Fixed costs }}$ |  |  |  | 4,000,000 |
|  | $=$ Total costs |  |  | $=$ | \$64,000,000 |
| 2) | \$64,000,000 | $\div$ | 20,000,000 units | $=$ | \$3.20 per unit |
| 3) | \$ 4,000,000 | $\div$ | 20,000,000 units | $=$ | \$0.20 per unit |
| 4) | Variable costs | $=$ | 75,000,000 units $\times$ \$ $1 /$ unit | = | \$75,000,000 |
|  | $+\underline{\text { Fixed costs }}$ |  |  | = | 4,000,000 |
|  | $=$ Total costs |  |  | = | \$79,000,000 |
| 5) | \$79,000,000 | $\div$ | 25,000,000 units | $=$ | \$3.16 per unit |
| 6) | \$ 4,000,000 | $\div$ | 25,000,000 units | = | \$0.16 per unit |

7) The average product cost decreases as production volume increases because the company is spreading its fixed costs over 5 million more units. The company will be operating more efficiently, so the average cost of making each unit decreases.

## Exercises (Group B)

(10 min.) E 2-32B
a. During production, manufacturing companies use direct labor and manufacturing overhead to convert direct materials into finished products.
b. Merchandising companies have only one category of inventory on the ir balance sheet.
c. During production as units are completed, they are moved out of work in process inventory into finished goods inventory.
d. Inventory merchandise includes all of the costs associated with getting the goods to the store including freight-in costs and import duties if the products for resale were purchased overseas.
e. Merchandis ing companies can either be wholesalers or retailers.
f. Raw materials inventory includes the wood, fasteners, and braces used in building picnic tables at a park furniture manufacturer.
g. Wholesalers sell products to other companies (typically not to individual consumers).
h. Service companies make up the largest sector of the U.S. economy.
i. Ford Motor Company and Post Cereals can be described as manufacturing companies.

Reqs. 1 and 2

| Accessory Shack |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Cost Classification |  |  |  |  |  |  |
|  | R \& D | Design | Purchases | Marketin g | $\frac{\text { Distributio }}{\underline{n}}$ | $\begin{gathered} \text { Custom } \\ \text { er } \\ \text { Service } \\ \hline \end{gathered}$ |
| Research on selling satellite radio service | \$400 |  |  |  |  |  |
| Purchases of merchandise |  |  | \$30,000 |  |  |  |
| Rearranging store layout |  | \$950 |  |  |  |  |
| Newspaper advertisements |  |  |  | \$5,200 |  |  |
| Depreciation expense on delivery trucks |  |  |  |  | \$1,400 |  |
| Payment to consultant for advice on location of new store | 2,500 |  |  |  |  |  |
| Freight-in |  |  | 3,900 |  |  |  |
| Salespersons' salaries |  |  |  | 4,000 |  |  |
| Customer complaint department |  |  |  |  |  | \$700 |
| Total | \$2,900 | \$950 | \$33,900 | \$9,200 | \$1,400 | \$700 |

Req. 3
The total inventoriable product costs are the $\$ 30,000$ of purchases plus the $\$ 3,900$ freight-in $=\$ 33,900$.

Reqs. 1, 2, and 3

| Cost Classification |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| Total costs | \$10 | \$ 4 | \$66 | \$12 | \$75 | \$10 | \$ 5 | \$2 |

## Req. 4

Total inventoriable product costs:

| Direct labor.. | \$ 12 |
| :---: | :---: |
| Direct materials. | 66 |
| Manufacturing overhead. | 75 |
| Total inventoriable product cost....... | \$153 |

## Req. 5

The total prime cost is:
Direct labor
\$ 12

Direct materials $\qquad$ 66
$\$ 78$

## Req. 6

The total conversion cost is:
Direct labor.
\$ 12
Manufacturing overhead.
75
$\$ 87$
(5-10 min.) E 2-35B
a. Dis tributing
b. Customer service
c. Marketing
d. Design
e. Research and Development (R\&D)
f. Purchasing

| Cost | Direct or Indirect cost? |
| :--- | :--- |
| a. S alary of the manager of the dealership | Indirect |
| b. Sales commissions | Direct |
| c. Cost of new cars | Direct |
| d. Cost of car detailing | Direct |
| e. S alary of the receptionist for the dealership | Indirect |
| f. Depreciation on the building | Indirect |
| g. Advertising in the local newspaper | Indirect |
| h. S alary of the sales manager for the New Car Sales department | Direct |
| i. Cost of drinks provided in the reception area | Indirect |
| j. Cost of gasoline used at the dealership | Indirect |
| k. Utilities expense for the building | Direct |
| l. New car brochures provided to prospective buyers | Indirect |

(10 min.) E 2-37B
a. Material and labor costs that can be traced directly to particular units manufactured are direct costs if the manufactured product is the cost object.
b. Direct costs are outlays that can be identified with a specific product or department.
c. Inventoriable product costs include the direct costs attributable to the production of the goods.
d. In manufacturing, when goods are sold, costs are transferred from the finished goods inventory account to cost of goods sold .
e. Allocation is used to assign the indirect costs to a product or de partment.
f. Inventoriable costs include direct material, direct labor, and manufacturing overhead costs.
g. Prime costs are the combination of direct materials and direct labor.
h. Period costs are expenditures that are not directly associated with the production of a product, such as advertising costs and general adminis trative costs.
i. Nearly anything of interest to a decision maker can be a cost object_, including products, stores, and departments.
j. Raw materials inventory, work in process inventory, and finished goods inventory are considered to be assets on the balance sheet.
k. Direct costs are those outlays that can be traced to a particular cost object.

1. Fringe benefits are the cost of compensation provided employees besides the employees' salaries and wages.
(15-20 min.) E 2-38B
Req. 1

|  |  | DM | DL | IM | IL | Other <br> MOH | Period |

| Crystal Bay Company |  |  |  |
| :---: | :---: | :---: | :---: |
| Calculation of Cost of Goods Manufactured |  |  |  |
| Beginning work in process inventory |  |  | \$ 35,000 |
| Add: Direct materials used: |  |  |  |
| Beginning raw materials inventory | \$ 26,000 |  |  |
| Purchases of direct materials | 73,000 |  |  |
| Available for use | 99,000 |  |  |
| Ending raw materials inventory | $(33,000)$ |  |  |
| Direct materials used |  | \$66,000 |  |
| Direct labor |  | 86,000 |  |
| Manufacturing overhead: |  |  |  |
| Indirect labor | \$ 40,000 |  |  |
| Insurance on plant | 10,000 |  |  |
| Depreciation - plant building and equipment | 13,200 |  |  |
| Repairs and maintenance - plant | 4,200 | 67,400 |  |
| Total manufacturing costs incurred during the year |  |  | 219,400 |
| Total manufacturing costs to account for |  |  | 254,400 |
| Less: Ending work in process inventory |  |  | (31,000) |
| Cost of goods manufactured |  |  | \$223.400 |

| Crystal Bay Company |  |  |
| :---: | :---: | :---: |
| Income Statement |  |  |
| For Last Year |  |  |
| Sales revenue ( $37,000 \times \$ 14$ ) |  | \$540,000 |
| Cost of goods sold: |  |  |
| Beginning finished goods inventory | \$ 14,000 |  |
| Cost of goods manufactured |  |  |
| (E 2-41B) | 223,400 |  |
| Cost of goods available for sale | 237,400 |  |
| Ending finished goods inventory | $(29,000)$ |  |
| Cost of goods sold |  | 208,400 |
| Gross profit |  | 331,600 |
| Operating expenses: |  |  |
| Marketing expenses | \$ 76,000 |  |
| General and adminis trative expenses | 27,500 | 103,500 |
| Operating income |  | \$ 228,100 |

Students may simply use the $\$ 208,400$ cost of goods sold computation from E $2-42 B$, rather than repeating the details of the computation here.
( 25 min .) E 2-44B
Instructional note: This is a fairly challenging exercise that requires students to work backwards through financials tatement elements.
a.

| Revenues | $\$ 27,900$ |
| :--- | ---: |
| Cost of goods sold | $\underline{15,500}$ |
| Gross profit | $\$ 12,400$ |

b. To determine beginning raw materials inventory, start with the materials used computation and work backwards:

| Beginning raw materials inventory | $\$ 2,400$ |
| :--- | ---: |
| Purchases of direct materials | 9,600 |
| Available for use | $\mathbf{1 2 , 0 0 0}$ |
| Ending raw materials inventory | $\underline{(3,500})$ |
| Direct materials used | $\$ 8,500$ |

c. To determine ending finished goods inventory, start by computing the cost of goods manufactured:

| Beginning work in process inve ntory |  | $\$ 0$ |
| :--- | ---: | ---: |
| Direct materials used | $\$ 8,500$ |  |
| Direct labor | 3,400 |  |
| Manufacturing overhead | $\underline{6,300}$ | 18,200 |
| Total manufacturing costs to account for |  | 18,200 |
| Ending work in process inventory |  | $(1,000)$ |
| Cost of goods manufactured |  | $\underline{(17,200}$ |

Now use the cost of goods sold computation to determine ending finished goods inventory:

| Beginning finished goods inventory | $\$ 4,900$ |
| :--- | ---: |
| Cost of goods manufactured (from above) | $\underline{17,200}$ |
| Cost of goods a vailable for sale | 22,100 |
| Ending finished goods inventory | $\underline{(6,600})$ |
| Cost of goods sold (from part A) | $\underline{\underline{15,500}}$ |

(15-20 min.) E 2-45B

| a. Fuel economy when purchasing new trucks for the <br> delivery fleet | Rele vant. |
| :--- | :--- |
| b. Real estate property tax rates when selecting the <br> location for a new order processing center | Rele vant |
| c. The purchase price of the old computer when replacing <br> it with a new computer with improved features | Irre le vant |
| d. The average cost of vehicle operation when purchasing <br> a new delivery van | Rele vant |
| e. The original cost of the current stove when selecting a <br> new, more efficient stove for a restaurant | Irrele vant |
| f. The fair market value (trade-in value) of the existing <br> forklift when deciding whe ther to replace it with a new, more <br> efficient model | Relevant |
| g. The cost of land when determining where to build a new <br> call center | Relevant |
| h. The cost of renovations when deciding whether to build <br> a new office building or to renovate the existing office <br> building | Rele vant |
| i. The cost of production when determining whether to <br> continue to manufacture the screen for a smartphone or to <br> purchase it from an outside supplier | Rele vant |
| j. Local tax incentives when selecting the location of a new <br> office complex for a company's headquarters | Relevant |

(10 min.) E2-46B
a. Costs that change in total in direct proportion to changes in volume are called variable costs.
b. Costs and benefits that are the same for all alternatives considered and can be ignored are called irrelevant costs.
c. Sunk costs are irrele vant costs that have already been incurred and cannot be changed or recovered.
d. The marginal costs at any production level is the cost required to produce the next unit.
e. Research and development and advertising costs are considered to be controllable costs because managers can influence the amount of these costs.
f. Fixed costs are costs that stay constant in total over the relevant range despite changes in volume.
g. Average cost is equal to the total costs of production divided by the number of units produced.
h. Differential costs are the differences in costs between two alternative courses of action.
(10 min.) E 2-47B

| COST | Variable or Fixed |
| :--- | :--- |
| a. Total wages paid to the hourly production workers | Variable |
| b. Property taxes at a manufacturer | Fixed |
| c. Freight costs at Ford Motor Company | Variable |
| d. Cost of fuel for the de livery department of a home improvement <br> store | Variable |
| e. Packaging costs for Crate and Barrel's web sales operations | Variable |
| f. Annual salary for a manager of a fast food restaurant | Fixed |
| g. Shipping costs for Amazon.com | Variable |
| h. Building le ase cost for a hair care salon | Fixed |
| i. Coffee costs for a coffee shop | Variable |
| j. Monthly straight-line depreciation costs for a factory | Variable |
| k. Monthly travel expenses for sales people | Fixed |
| l. Property insurance costs on a warehouse | Variable |
| m. Cost of postage for the bills mailed by an electric company | Fixed |
| n. Cost of produce at a grocery store |  |
| o. Monthly lawn maintenance fee for a tenant in an office building |  |

(10 min.) E 2-48B

| a) | Variable costs | $=$ | 20,000,000 units $\times \$ 1 /$ unit | $=$ | \$20,000,000 |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | $+\underline{\text { Fixed costs }}$ |  |  |  | 4,000,000 |
|  | $=$ Total costs |  |  | $=$ | \$24,000,000 |
| b) | \$24,000,000 | $\div$ | 20,000,000 units | $=$ | \$1.20 per unit |
| c) | \$ 4,000,000 | $\div$ | 20,000,000 units | = | \$0.20 per unit |
| d) | Variable costs | $=$ | 20,000,000 units $\times \$ 1.20 /$ unit | $=$ | \$25,000,000 |
|  | $+\underline{\text { Fixed costs }}$ |  |  | $=$ | 4,000,000 |
|  | $=$ Total costs |  |  | $=$ | \$29,000,000 |
| e) | \$29,000,000 | $\div$ | 25,000,000 units | = | \$1.16 per unit |
| f) | \$ 4,000,000 | $\div$ | $25,000,000$ units | $=$ | \$0.16 per unit |

$=\$ 20,000,000$
$=\quad 4,000,000$
$=\$ 24,000,000$
$=\quad \$ 1.20$ per unit
$=\$ 0.20$ per unit
$=\$ 25,000,000$
$=\quad 4,000,000$
$=\$ 29,000,000$
$=\$ 1.16$ per unit
$=\$ 0.16$ per unit
g) The average product cost decreases as production volume increases because the company is spreading its fixed costs over 5 million more units. The company will be operating more efficiently, so the average cost of making each unit decreases.

## Problems (Group A)

| Total costs | \$1.140 | $\begin{gathered} \underline{\$ 1,40} \\ \underline{\underline{\underline{0}}} \\ \hline \hline \end{gathered}$ | \$21.790* | $\underline{\$ 7.700}$ | \$4.975 | $\underline{\underline{\$ 720}}$ | $\underline{\underline{\$ 565}}$ | \$215 |

*Salt's low value makes it likely treated as indirect materials. However, some students may classify salt as direct materials.

Req. 4
Total inventoriable product costs:

| Direct materials. | \$21,790 |
| :---: | :---: |
| Direct labor. | 7,700 |
| Manufacturing overhead... | 4,975 |
| Total inventoriable product costs.......... | \$34,465 |

## Req. 5

The managers of R\&D and Design are likely to cut their costs. This can increase costs of later value-chain elements. For example, if the recipe is not adjusted to consumer tastes, more marketing may be required and/or sales may decline. If the recipe is not designed so the soda is easy to produce, or if the production process is not well laid-out, production costs will be higher than they need to be. If cutting R\&D and Design costs leads to lower quality soda, customer service costs such as returns may also increase.
(45-55 min.) P 2-50A

Part One:

| Pam's Posies Floral |  |  |
| :---: | :---: | :---: |
| Income Statement |  |  |

| Purchases of merchandise | 37,000 |  |
| Cost of goods available for sale | 49,200 |  |
| Ending inventory | (9,800) |  |
| Cost of goods sold |  | 39,400 |
| Gross profit |  | 15,600 |
| Operating expenses: |  |  |
| Utilities expense | \$ 4,300 |  |
| Rent expense | 3,200 |  |
| Sales commission expense | 1,100 | 8,600 |
| Operating income |  | \$7,000 |

## Part Two:

Req. 1

| Floral Manufacturing |  |  |  |
| :---: | :---: | :---: | :---: |
| Calculation of Cost of Goods Manufactured |  |  |  |
| Year Ended December 31, 2012 |  |  |  |
| Beginning work in process inventory |  |  | \$ 0 |
| Add: Direct materials used: |  |  |  |
| Beginning raw materials inventory | \$18,000 |  |  |
| Purchases of direct materials | 35,000 |  |  |
| Available for use | 53,000 |  |  |
| Ending raw materials inventory | (9,500) |  |  |
| Direct materials used |  | \$43,500 |  |
| Direct labor |  | 24,000 |  |
| Manufacturing overhead: |  |  |  |
| Utilities for plant | \$ 8,200 |  |  |
| Plant janitorial services | 4,200 |  |  |
| Rent on manufacturing plant | 1,050 |  |  |
|  |  | 13,450 |  |
| Total manufacturing costs incurred |  |  |  |
| during the year |  |  | 80,950 |
| Total manufacturing costs to |  |  |  |
| account for |  |  | 80,950 |
| Less: Ending work in process inventory |  |  | (5,000) |
| Cost of goods manufactured |  |  | \$75,950 |

Req. 2

| Floral Manufacturing |  |  |
| :---: | :---: | :---: |
| Income Statement |  |  |
| Year Ended December 31, 2012 |  |  |
| Sales revenue |  | \$109,000 |
| Cost of goods sold: |  |  |
| Beginning finished goods inventory | \$ 0 |  |
| Cost of goods manufactured* | 75,950 |  |
| Cost of goods available for sale | 75,950 |  |
| Ending finished goods inventory | (5,500) |  |
| Cost of goods sold |  | 70,450 |
| Gross profit |  | 38,550 |
| Operating expenses: |  |  |
| Customer service hotline expense | 1,600 |  |
| De livery expense | 3,000 |  |
| Sales salaries expense | 4,500 | 9,100 |
| Operating income |  | \$29.450 |

*From the Calculation of Cost of Goods Manufactured in Req. 1.
Req. 3
A manufacturer's cost of goods sold is based on its cost of goods manufactured. In contrast, a merchandiser's cost of goods sold is based on its merchandise purchases.

| Beginning raw materials inventory | \$24,000 |  |  |
| Purchases of direct materials | 53,000 |  |  |
| Available for use | 77,000 |  |  |
| Ending raw materials inventory | (23,000) |  |  |
| Direct materials used |  | \$54,000 |  |
| Direct labor |  | 70,000 | 4 |
| Manufacturing overhead |  | 45,000 |  |
| Total manufacturing costs |  |  |  |
| incurred during the month |  |  | 169,000 |
| Total manufacturing costs to |  |  |  |
| account for |  |  | 190,000 |
| Less: Ending work in process inventory |  |  | (27,000) |
| Cost of goods manufactured |  |  | \$163,000 |

| Elly Manufacturing Company |  |  |
| :---: | :---: | :---: |
| Income Statement |  |  |
| Month Ended June 30 |  |  |
| Sales revenue |  | \$510,000 |
| Cost of goods sold: |  |  |
| Beginning finished goods inventory | \$116,000 |  |
| Cost of goods manufactured* | 163,000 |  |
| Cost of goods available for sale | 279,000 |  |
| Ending finished goods inventory | $\checkmark$ (69,000) |  |
| Cost of goods sold |  | 210,000 |
| Gross profit |  | 300,000 |
| Operating expenses: |  |  |
| Marketing expense | 94,000 |  |
| Administrative expense | 60,000 | 154,000 |
| Operating income | -1 | \$146,000 |

[^0]1) As shown below, the quantitative data suggests you would net $\$ 10,150$ more by taking Job \#1 and living at home.

| Attributes: | Take Job \#1 and live at <br> home | Take Job \#2 and rent an <br> apartment |
| :--- | ---: | ---: |
| Salary | $\$ 44,000$ | $\$ 49,000$ |
| Rent | 0 | $(12,000)$ |
| Food | 0 | $(\mathbf{2 , 5 0 0 )}$ |
| Cable and Internet | 0 | $(650)$ |
| Salary, net of livingexpenses | $\mathbf{0}$ | $\$ 34, \mathbf{8 5 0}$ |

Net Difference $=\$ 44,000-\$ 33,850=\$ 10,150$
2) The costs of doing laundry, operating the car, and paying for cell phone service are irrele vant because they do not differ between the two alternatives.
3) You might consider whether you would like to live with your parents again or not! Even though you would benefit by $\$ 10,150$ if you live at home, you may decide it isn't worth it!
4) If you want Job \#2 and you want to live at home, you will benefit by the higher salary and the lower living expenses. However, you'll need to factor in the higher costs of commuting to work via car (gas, tolls, service) or train (fare). Qualitatively, you will want to consider whether the time spent commuting is worth the extra money you will be netting from living at home.
(15-20 min.) P 2-53A

Req. 1

| Monthly pizza volume | 2,500 | 5,000 | 10,000 |
| :---: | :---: | :---: | :---: |
| Total fixed costs | \$ 5,000 | \$ 5,000 | \$ 5,000 |
| Total variable costs | 3,000 | 6,000 | 12,000 |
| Total costs | \$ 8,000 | \$11,000 | \$17,000 |
| Fixed cost per pizza | \$ 2.00 | \$ 1.00 | \$ 0.50 |
| Variable cost per pizza | 1.20 | 1.20 | 1.20 |
| Average cost per pizza | \$ 3.20 | \$ 2.20 | \$ 1.70 |
| Selling price per pizza | \$ 5.50 | \$ 5.50 | \$ 5.50 |
| Average profit per pizza | \$ 2.30 | \$ 3.30 | \$ 3.80 |

Req. 2
Companies want to operate near or at full capacity to better utilize the resources they spend on fixed costs. The more units they produce, the lower the average fixed cost per unit.

Req. 3
At the current volume, the restaurant's monthly profit is $\$ 16,500$ calculated as follows

| Total Sales Revenue | - Total Costs | $=$ Monthly Profit |
| :---: | :---: | :---: |
| $(\$ 5.50$ per pizza $\times 5,000$ <br> pizzas $)$ | $-\$ 11,000$ | $=\$ 16,500$ |

If the owner decreases the sales price to increase volume, the new monthly profit will be:

| Total Sales Revenue at <br> the new price and <br> volume | - Total Costs at the <br> new volume | $=$ New Monthly Profit |
| :---: | :---: | :---: |
| $\left(\begin{array}{c}\$ 5.50 \text { per pizza } \times \\ 10,000 \text { pizzas })\end{array}\right.$ | $-\$ 17,000$ | $=\$ 33,000$ |

Since the restaurant will generate an additional $\$ 16,500$ of profit the owner should decrease the sales price to increase the volume.

*Salt's low value makes it likely treated as indirect materials. However, some students may classify salt as direct materials.

Req. 4
Total inventoriable product costs:

| Direct materials.................................. | \$21,410 |
| :---: | :---: |
| Direct labor........................................ | 7,700 |
| Manufacturing overhead...................... | 4,875 |
| Total inventoriable product costs.......... | \$33,985 |

## Req. 5

The managers of R\&D and Design are likely to cut their costs. This can increase costs of later value-chain elements. For example, if the recipe is not adjusted to consumer tastes, more marketing may be required and/or sales may decline. If the recipe is not designed so the soda is easy to produce, or if the production process is not well laid out, production costs will be higher than they need to be. If cutting R\&D and Design costs leads to lower quality soda, customer service costs such as returns may also increase.

1) As shown below, the quantitative data suggests you would net $\$ 10,300$ more by taking Job \#1 and living at home.

| Attributes: | $\begin{array}{c}\text { Take Job \#1 and live at } \\ \text { home }\end{array}$ | $\begin{array}{c}\text { Take Job \#2 and rent an } \\ \text { apartment }\end{array}$ |
| :--- | ---: | :---: |
| Salary | $\$ 41,000$ | $\$ 46,000$ |
| Rent | 0 | $(12,000)$ |$](2,500)$

Net Difference $=\$ 41,000-\$ 30,750=\$ 10,300$
2) The costs of doing laundry, operating the car, and paying for cell phone service are irrelevant because they do not differ between the two alternatives.
3) You might consider whether you would like to live with your parents again or not! Even though you would benefit by $\$ 10,300$ if you live at home, you may decide it isn't worth it!
4) If you want Job \#2 and you want to live at home, you will benefit by the higher salary and the lower living expenses. However, you'll need to factor in the higher costs of commuting to work via car (gas, tolls, service) or train (fare). Qualitatively, you will want to consider whether the time spent commuting is worth the extra money you will be netting from living at home.
(15-20 min.) P 2-58B
Req. 1

| Monthly pizza volume | 4,500 | 6,000 | 7,500 |
| :---: | :---: | :---: | :---: |
| Total fixed costs | \$ 9,000 | \$ 9,000 | \$ 9,000 |
| Total variable costs | 6,300 | 8,400 | 10,500 |
| Total costs | \$15,300 | \$17,400 | \$19,500 |
| Fixed cost per pizza | \$ 2.00 | \$ 1.50 | \$ 1.20 |
| Variable cost per pizza | 1.40 | 1.40 | 1.40 |
| Average cost per pizza | \$ 3.40 | \$ 2.90 | \$ 2.60 |
| Sales price per pizza | \$6.25 | \$6.25 | \$6.25 |
| Average profit per pizza | \$ 2.85 | \$ 3.35 | \$ 3.65 |

## Req. 2

Companies want to operate near or at full capacity to better utilize the resources they spend on fixed costs. The more units they produce, the lower the average fixed cost per unit.

Req. 3
At the current volume, the restaurant's monthly profit is $\$ 20,100$ calculated as follows

| Total Sales Revenue | - Total Costs | $=$ Monthly Profit |
| :---: | :---: | :---: |
| $(\$ 6.25$ per pizza $\times 6,000$ <br> pizzas $)$ | $-\$ 17,400$ | $=\$ 20,100$ |

If the owner decreases the sales price to increase volume, the new monthly profit will be:

| Total Sales Revenue at <br> the new price and <br> volume | - Total Costs at the <br> new volume | = New Monthly Profit |
| :---: | :---: | :---: |
| $(\$ 6.25$ per pizza $\times 7,500$ |  |  |
| pizzas $)$ |  |  |

Since the restaurant will generate an additional $\$ 3,525$ of profit ( $\$ 23,5625-\$ 20,100$ ), the owner should decrease the sales price to increase the volume.

## Discussion \& Analysis

1. Briefly describe a service company, a merchandising company, and a manufacturing company. Give an example of each type of company, but do not use the same examples as given in the chapter.

Service companies are in business to sell intangible services. Merchandising companies are in business to sell tangible products the y buy from manufacturers. Manufacturing companies use labor, plant, and equipment to convert raw materials into new finished products. An accounting firm is an example of a service company; Barnes \& Noble is an example of a merchandising company; and Johnson \& Johnson is an example of a manufacturer.
2. How do service, merchandising, and manufacturing companies differ from each other? How are service, merchandising, and manufacturing companies similar to each other? List as many similarities and differences as you can identify.

Differ:

- Inventories
- Primary output
- Customers

Student answers will vary
Similar:

- Profit motivated
- Marketing
- GAAP

Student ans wers will vary
3. What is the value chain? What are the six types of business activities found in the value chain? Which type(s) of business activities in the value chain generate costs that go directly to the income statement once incurred? What type(s) of business activities in the value chain generate costs that flow into inventory on the balance sheet?

The value chain is the activities that add value to a firm's products and services. The six types of business activities in the value chair are $\mathrm{R} \& \mathrm{D}$, design, production or purchases, marketing, distribution, and customer service. All costs along the value chain for service companies, all except for purchases for merchandisers, and all except for production for manufacturers. Purchases flow into inventory for a merchandiser and production flows into inventories for a manufacturer.
4. Compare direct costs to indirect costs. Give an example of a cost at a company that could be a direct cost at one level of the organization but would be considered an indirect cost at a different level of that organization. Explain why this same cost could be both direct and indirect (at different levels).

A direct cost can be traced to a cost object whereas an indirect cost relates to the cost object but cannot be traced to it. The salary of a car sales manager is a direct cost to the sales department, but an indirect cost of the car itself. The salary of a sales manager is directly traceable to the sales department because that is the only place the manager works in the company. The salary is an indirect cost of the car because it is impossible to determine how much of it belongs to a specific car. In other words, the sales manager's salary affects the cost of all cars sold, but is not traceable to individual cars.
5. What is meant by the term "inventoriable product costs"? What is meant by the term "period costs"? Why does it matter whether a cost is an inventoriable product cost or a period cost?

Inventoriable product costs are all costs of a product that GAAP requires companies to treat as an asset (inventory) for external financial reporting. These costs are not expensed until the product is sold. Period costs are costs that are expensed in the period in which they are incurred; often called Operating Expenses, or Selling, General, and Administrative Expenses. An inventoriable product cost is treated as an asset until the product is sold; it will benefit a future period. A period cost is expensed when it is incurred as it has no future value.
6. Compare inventoriable product costs to period costs. Using a product of your choice, give examples of inventoriable product costs and period costs. Explain why you categorized your costs as you did.

Levi Strauss makes jeans. The inventoriable product costs would include denim, thread, zippers, labor, and factory overhead. All of these costs are related to the production of the jeans and are therefore inventoriable.
The costs of advertising the jeans in magazines, commissions paid to employees who sell the jeans to merchandisers, and the cost of shipping the jeans to buyers are all period costs because they are incurred once the jeans have been produced and have no future value to the company.
7. Describe how the income statement of a merchandising company differs from the income statement of a manufacturing company. Also comment on how the income statement from a merchandising company is similar to the income statement of a manufacturing company.

The Cost of goods sold section of the income statement is different for a merchandiser and a manufacturer because a merchandiser buys finished goods whereas a manufacturer produces finished goods. The merchandiser uses the cost of purchases in the computation of Cost of goods sold, where the manufacturer uses the Cost of goods manufactured in the computation of Cost of goods sold. The rest of the income statement is the same for both merchandisers and manufacturers. It includes Sales re venue, Gross profit, Operating expenses, and Operating income.
8. How are the cost of goods manufactured, the cost of goods sold, the income statement, and the balance sheet related for a manufacturing company? What specific items flow from one statement or schedule to the next? Describe the flow of costs between the cost of goods manufactured, the cost of goods sold, the income statement, and the balance sheet for a manufacturing company.

The Cost of goods manufactured includes all the costs of production, direct material, direct labor, and manufacturing overhead. This amount is used in the preparation of the income statement in the computation of Cost of goods sold where it is added to beginning Finished goods inventory to determine

Cost of goods available for sale. The remaining Finished goods that have not been sold is shown on the balance sheet as Inventory.
9. What makes a cost relevant or irrelevant when making a decision? Suppose a company is evaluating whether to use its warehouse for storage of its own inventory or whether to rent it out to a local theater group for housing props. Describe what information might be relevant when making that decision.

When making a decision, a cost is considered relevant or irrelevant depending on whether it changes between the alternatives in the decision. Some relevant costs to consider in the evaluation of whether to use the warehouse for storage or whether to rent it would be the cost of storage elsewhere, how much rent could be charged for the warehouse, insurance costs, and so forth.
10. Explain why "differential cost" and "variable cost" do not have the same meaning. Give an example of a situation in which there is a cost that is a differential cost but not a variable cost.

A differential cost is the difference in cost between two alternative courses of action whereas a variable cost is a cost that changes in total in direct proportion to changes in volume. If a company was deciding between renting office space downtown (more expensive) or in the suburbs (less expensive), the cost of rent would be an example of a differential cost that is not a variable cost. Rent is a fixed cost.

Student answers may vary.
11. Greenwashing, the practice of overstating a company's commitment to sustainability, has been in the news over the past few years. Perform an Internet search of the term "greenwashing." What examples of greenwashing can you find?

Student answers may vary.
12. In the chapter, Ricoh was mentioned as a company that has designed its copiers so that at the end of the copier's life, Ricoh will collect and dismantle the product for usable parts, shred the metal casing, and use the parts and shredded material to build new copiers. This product design can be called "cradle to cradle" design. Are there any other products you are aware of that have a "cradle to cradle" design? Perform an Internet search for "cradle to cradle design" or a related term if you need ideas.

Student ans wers may vary.

## Application \& Analysis

## A2-60 Costs in the Value Chain at a Real Company and Cost Objects

Choose a company with which you are familiar that manufactures a product. In this activity, you will be making reasonable assumptions about the activities involved in the value chain for this product; companies do not typically publish information about the ir value chain.

## Basic Discussion Questions

1. Describe the product that is being produced and the company that produces it.

The product is jeans and the company is Levi $\mathrm{Strauss} \& \mathrm{Co}$.
2. Describe the six value chain business activities that this product would pass through from its inception to its ultimate delivery to the customer.

The six value chain business activities are

- R\&D
- Design
- Production
- Marketing
- Distribution
- Customer Service

3. List at least three costs that would be incurred in each of the six business activities in the value chain.

- $R \& D$ - investigating new fabrics, customer needs surveys, innovation
- Design - style, quality, durability
- Production - material, labor, overhead
- Marketing - advertisements, sponsorships, Internet presence
- Dis tribution - shipping, adminis trative costs, storage
- Customer Service - warranties, call center, customer email support

4. Classify each cost you identified in the value chain as either being an inventoriable product cost or a period cost. Explain your justification.

All the costs, with the exception of production costs, are period costs. Only the production costs are inventoriable.
5. A cost object can be anything for which managers want a separate measurement of cost. List three different potential cost objects other than the product itself for the company you have selected.

- Advertising
- Internal control
- Environmental susta inability

6. List a direct cost and an indirect cost for each of the three different cost objects in \#5. Explain why each cost would be direct or indirect.

- Advertising
- Direct - cost of advertising 501 brand jeans
- Indirect - cost of advertis ing Levi Strauss \& Co.
- Internal Control
- Direct - cost of separating duties within a department
- Indirect - Audit Committee costs for the company
- Environmental Sustainability
- Direct - Zero waste within a department
- Indirect - Companywide energy efficiency

Note: Student ans wers will vary.

## Decision Case

(30 min.) A2-61

## Req. 1

The ending inventory costs derived from the following schedule are: Raw materials $\$ 113,000$, Work in process $\$ 229,000$, and Finished goods $\$ 154,000$.

| PowerBox |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Inventory Reconstruction Schedule |  |  |  |  |  |
| Raw materials inventory |  | Work in Process Inventory |  | Finished Goods Inventory |  |
| Beginning inventory | $\begin{aligned} & \$ 113,000 \\ & (\mathrm{G}) \\ & \hline \end{aligned}$ | Beginning Inventory | \$ 229,000 (G) | Beginning inventory | \$ 154,000 (G) |
| + Purchases | $\begin{aligned} & 476,000 \\ & (\mathrm{G}) \\ & \hline \end{aligned}$ | + Direct Materials Used | 446,000 ${ }^{\text {e }}$ | + Cost of goods manufactured | 1,186,000 ${ }^{\text {c }}$ |
|  |  | + Direct labor | 505,000 (G) |  |  |
|  |  | + Manufacturing Overhead | 245,000 (G) |  |  |
| $=$ Direct <br> Materials available for use | 589,000 | $=\text { Total }$ <br> manufacturing costs to account for | 1,425,000 (G) | $=$ Cost of goods a vailable for sale | 1,340,000 (G) |
| - Ending inventory | $143,000^{\text {f }}$ | - Ending inventory | 239,000 ${ }^{\text {d }}$ | - Ending inventory | 150,000 ${ }^{\text {b }}$ |
| = Direct <br> Materials used | \$446,000 ${ }^{\text {e }}$ | $=\underset{\text { manufactured }}{\text { Cost }}$ | \$1,186,000 ${ }^{\text {c }}$ | $\begin{aligned} & =\text { Cost of goods } \\ & \text { Sold } \end{aligned}$ | \$1,190,000 ${ }^{\text {a }}$ |

$(G)=$ Amount given in the case.
${ }^{\text {a }}$ Cost of good sold:

| Sales | $\times$ | $(1-$ Gross profit $\%)$ | $=\quad$ Cost of goods sold |
| :--- | :--- | :--- | :--- |
| $\$ 1,700,000$ | $\times$ | $70 \%$ | $=$ |

${ }^{\mathrm{b}}$ Ending finished goods inventory:

Cost of goods available for sale \$1,340,000

- Ending finished goods inventory
- Ending finished goods inventory Ending finished goods inventory

$$
\begin{aligned}
& =\text { Cost of goods sold } \\
& =\quad \$ 1,190,000 \\
& =\$ 150,000
\end{aligned}
$$

${ }^{c}$ Cost of goods manufactured:
Beginning finished goods inventory

$$
\begin{array}{rlc}
+ \text { Cost of goods manufactured } & =\begin{array}{l}
\text { Cost of goods } \\
\\
\end{array} & \text { a vailable for sale }
\end{array}
$$

${ }^{\mathrm{d}}$ Ending work in process inventory:

| Total manufacturing <br> costs to account for | - | Ending work in process inventory |  |
| :---: | :---: | :---: | :---: |
| $\$ 1,425,000$ |  |  | Cost of goods <br> manufactured |
|  |  | Ending work in process inventory | $=$ |

Req. 2
Today's Date
PowerBox
5 Research Triangle Way
Raleigh, NC 27698
Mr. Gary Streer
Industrial Insurance
1122 Main Street
Hartford, CT 06268
Dear Mr. Streer:
As a result of flooding, PowerBox suffered the complete loss of all inventories at its facility at 5 Research Triangle Way. Industrial Insurance covers these inventories under policy \#3454340-23. Our records indicate the cost of these inventories was:

| Raw materials | $\$ 113,000$ |
| :--- | ---: |
| Work in process | 229,000 |
| Finished goods | $\underline{154,000}$ |
| Total inventory cost | $\underline{\underline{\$ 496,000}}$ |

Please contact me at your earliest convenience regarding our insurance claim.
Sincerely,
Annette Plum
Controller
d. advertising for the Sleep-Well Inn chain. (CMA Adapted)
c. $\$ 110,110$.
