	A) Plan	B) Control	C) Opportunity	D) All of the above		
	Answer: C					

ESSAY. Write your answer in the space provided or on a separate sheet of paper.

51) What are the 5 building blocks of competitive advantage? Provide examples of hospitality firms whose strategy focuses on one or more of these building blocks.

Answer: Competitive advantage is the ability to do something better than the competition. The five building block competitive advantage are efficiency, quality, innovation, customer responsiveness and size. By employir five elements, organizations can gain or maintain a competitive edge and make their product and/or servicensumer's choice.

Efficiency is the ability to keep production costs to a minimum. Southwest Airlines was known in the industry for only providing limited beverage and snack service, long before it became cost containment fo airlines.

Quality is a product's ability to do what it was designed to do. Again, Southwest shows quality when consistently provides on-time flights. The flight schedules are made and kept - a display of consistency a quality.

Innovation is the ability to create and re-create products to keep them cutting edge — that is one step ϵ of other products. With the airline, lack of a hub system might be considered innovative. It is different frc rest of the industry and has proven quite successful.

Customer responsiveness ensures that there is individual attention paid to consumer's needs. This manot only on the positive, like listening to a customer, but also the negative. Take for example a passenger bumped off a flight. An employee uses customer responsiveness to place, quickly and without hassle, that customer on another flight. Even though the service may not be what the customer expected, the outcome still be positive.

Size, either as it relates to a specific product or the organization as a whole, can be a competitive advalor The fact that Southwest has planes that are all the same size and interchangeable works to its advantage (i.e., broken down planes/replacement planes and parts).

52) What are the different management orientations? Discuss the pros and cons of each one. Provide examples of hospitality firms that follow each of the different management orientations.

Answer: Firms and organizations all operate with an underlying basic philosophy or orientation. Orientations disc the text include: operations, product/service, selling, bottom line and marketing.

An operations orientation provides a direction or script for every foreseeable circumstance to ensure a "smooth operation." Pro: Consistent service, particularly in large or franchised organizations. Con: Some forgets the customer if there is no room for change or deviation. Customer can be left out of the equation i name of cost.

A product/service orientation puts the emphasis on having the finest product/service available for the customer. Pro: Focus on providing the best for the customer. Con: They may not have "the best" product/service; they may not offer what the customer actually wants.

A selling orientation focuses on finding customers to come to the product or service. Pro: Generates customers for the product/service. Con: The customer may be to meet a "quota" and may not be your targe optimal customer. Sales tactics are usually heavily promotional based.

A bottom line orientation focuses on profitability and ROI. Pro: This aspect of concern is needed for a business to survive. Con: A company cannot survive solely with this orientation. All decisions are made name of profit, at the expense of the customer relationship.

A marketing orientation follows the basic marketing concept that the best way to create a thriving bus is to serve the customer better and put them as a focus when making business decisions. Pro: Will create ε self-sustaining and profitable business if the customer is always "king." Con: The firm must *practice* the marketing concept for this to be effective.
