Name:_____ Class:_____ Date:_____

Tutorial 02: Getting Started with CSS

True / False

1. The most common way of accepting user input is through a web form.
    a. True
    b. False

ANSWER:	True
POINTS:	1
DIFFICULTY:	Easy
REFERENCES:	HTML 86
QUESTION TYPE:	True / False
HAS VARIABLES:	False
LEARNING OBJECTIVES:	02.01 - Explore the history of CSS
NATIONAL STANDARDS:	United States - BUSPROG: Technology
TOPICS:	Introducing CSS
KEYWORDS:	Bloom's: Remember
DATE CREATED:	10/9/2015 1:24 AM
DATE MODIFIED:	11/8/2016 3:11 AM

2. User-defined styles can be superseded by external styles, which are the styles that a website author creates and places within a Cascading Style Sheets (CSS) file and links to the page.
    a. True
    b. False

ANSWER:	True
POINTS:	1
DIFFICULTY:	Easy
REFERENCES:	HTML 87
QUESTION TYPE:	True / False
HAS VARIABLES:	False
LEARNING OBJECTIVES:	02.03 - Explore style precedence and inheritance
NATIONAL STANDARDS:	United States - BUSPROG: Technology
TOPICS:	Introducing CSS
KEYWORDS:	Bloom's: Remember
DATE CREATED:	10/9/2015 1:26 AM
DATE MODIFIED:	10/9/2015 1:31 AM

3. The first style sheet interpreted by a browser is the one built into the browser itself.
    a. True
    b. False

ANSWER:	True
POINTS:	1
DIFFICULTY:	Easy
REFERENCES:	HTML 87
QUESTION TYPE:	True / False

Tutorial 02: Getting Started with CSS

HAS VARIABLES:	False
LEARNING OBJECTIVES:	02.02 - Study different types of style sheets
NATIONAL STANDARDS:	United States - BUSPROG: Technology

136. It defines the styles applied to an element or group of elements.
ANSWER: c
POINTS: 1

137. It is a numerical representation that precisely describes a color.
ANSWER: a
POINTS: 1

138. They are numbers that represent a color according to the intensity of its red, green, and blue components.
ANSWER: b

Tutorial 02: Getting Started with CSS

POINTS: 1

139. It is a number expressed in the base-16 numbering system.
ANSWER: e
POINTS: 1

140. It measures the intensity of a chosen color and ranges from 0% (no color) to 100% (full color).
ANSWER: f
POINTS: 1

141. They are the units expressed relative to the size of other objects within a web page.
ANSWER: g
POINTS: 1

142. They are specified in one of five standard units of measurement.
ANSWER: d
POINTS: 1

143. It represents a single dot on an output device.
ANSWER: h
POINTS: 1

144. It is a relative measurement to provide scalability.
ANSWER: l
POINTS: 1

145. It measures the amount of space between words.
ANSWER: i
POINTS: 1

146. It measures the amount of space between lines of text.
ANSWER: k
POINTS: 1

147. It measures the amount of space between characters.
ANSWER: j
POINTS: 1

Essay

148. Explain the styles to control some basic typographic attributes, such as kerning, tracking, and leading. Also, mention when a hanging indent is created.
ANSWER: **Kerning** measures the amount of space between characters, while **tracking** measures the amount of space between words. The properties to control an element's kerning and tracking are
                letter-spacing: *value*;

Name: _____   Class: _____   Date: _____

Tutorial 02: Getting Started with CSS

word-spacing: *value*;

where *value* is the size of space between individual letters or words. These sizes can be specified with the same units as used for font sizing. The default value for both kerning and tracking in 0 pixels. A positive value increases the letter and word spacing, while a negative value reduces the space between letters and words.

Leading measures the amount of space between lines of text and is set using the following line-height property:

line-height: *size*;

where *size* is a value or a percentage of the font size of the text on the affected lines. If no unit is specified, the size value represents the ratio of the line height to the font size. The default value is 1.2 or 1.2em so that the line height is 20% larger than the font size. By contrast, the following style sets the line height to twice the font size, making the text appear double-spaced:

line-height: 2em;

An additional way to control text spacing is to set the indentation for the first line of a text block by using the following text-indent property:

text-indent: *size*;

where size is expressed in absolute or relative units, or as a percentage of the width of the text block. For example, an indentation value of 5% indents the first line by 5% of the width of the block. The indentation value can be negative, extending the first line to the left of the text block to create a **hanging indent.**
