

Name: _____ Class: _____ Date: _____

chapter 2

Indicate whether the statement is true or false.

1. Books, graffiti, and television programs can all be sources of data for secondary analysis.
 - a. True
 - b. False
2. Feminist research methods support the idea that researchers should be neutral and detached.
 - a. True
 - b. False
3. Unstructured interviews involve asking all research participants the same questions.
 - a. True
 - b. False
4. Field research provides opportunities for researchers to view from the inside what may not be obvious to an outside observer.
 - a. True
 - b. False
5. Most observation research takes the form of a case study.
 - a. True
 - b. False
6. The dependent variable is manipulated to show an outcome or effect on another variable.
 - a. True
 - b. False
7. All social research makes use of hypotheses.
 - a. True
 - b. False
8. Secondary analysis is referred to as “obtrusive” research because it includes a variety of reactive research techniques.
 - a. True
 - b. False
9. Knowledge that is acquired by tradition is based on the assumption that knowledge is best gained by direct, systematic observation.
 - a. True
 - b. False
10. Finding a correlation between two variables allows a researcher to determine “cause and effect.”
 - a. True
 - b. False

chapter 2

11. In participant observation studies, researchers must decide whether to let people know they are being studied.
 - a. True
 - b. False

12. Interviews are a useful research method for eliciting information about complicated or sensitive matters.
 - a. True
 - b. False

13. Grounded theory is an inductive approach theory that links theory and data collection as the research process.
 - a. True
 - b. False

14. The deductive approach to research begins with the collection of data.
 - a. True
 - b. False

15. The major advantage of the controlled experiment is the researcher's control over the environment and the ability to isolate the experimental variable.
 - a. True
 - b. False

16. Reliability is the extent to which a study or research instrument accurately measures what it is supposed to measure.
 - a. True
 - b. False

17. Maintaining confidentiality means the research cannot link a given response to a given respondent.
 - a. True
 - b. False

18. One of the benefits of scientific knowledge is that its methods build in mechanisms for self-correction.
 - a. True
 - b. False

19. Explanatory studies are designed to find out what is happening to whom, where, and when.
 - a. True
 - b. False

20. Researchers are required by a code of ethics to weigh the societal benefits of research against the potential costs to participants.
 - a. True
 - b. False

chapter 2

21. Control groups are those that are exposed to changes in the independent variable.
 - a. True
 - b. False

22. A weakness of secondary analysis is that the data are hard to obtain and quite expensive to use.
 - a. True
 - b. False

23. Participant observation involves collecting systematic observations while being part of the activities of the group being studied.
 - a. True
 - b. False

24. Feminist research methods were developed to rectify a perceived bias against women in the processes of research design and data collection.
 - a. True
 - b. False

25. In a simple random sample, all members of a population have equal chance of being selected to participate in the research study.
 - a. True
 - b. False

26. Surveys have the benefit of representing people's ideas or experiences well.
 - a. True
 - b. False

27. Qualitative studies rely on the formation of hypotheses.
 - a. True
 - b. False

28. Many researchers avoid using the Internet to conduct research due to ethical issues.
 - a. True
 - b. False

29. Questionnaires elicit high rates of response from participants.
 - a. True
 - b. False

30. Variables are frequently used in quantitative research.
 - a. True
 - b. False

31. Questions in unstructured interviews are quite often derived from the answers to previous questions.
 - a. True

chapter 2

- b. False
- 32. Critical research strategies require investigators to oppose government policies.
 - a. True
 - b. False
- 33. Validity is the extent to which a study or research instrument accurately measures what it is supposed to measure.
 - a. True
 - b. False
- 34. Field research typically generates quantitative data.
 - a. True
 - b. False
- 35. When subjects change their behaviour in response to knowing they are being studied, this is referred to as reactivity.
 - a. True
 - b. False
- 36. Thanks to a recent court decision, investigators can be assured that they can, in normal circumstances, assure confidentiality to their research participants.
 - a. True
 - b. False
- 37. Triangulation requires researchers to confirm their findings using experimentation.
 - a. True
 - b. False

Indicate the answer choice that best completes the statement or answers the question.

- 38. A researcher wanted to learn more about neighbourhood environments, so he collected data about the sizes of homes, the width of roads and sidewalks, and the number of trees. With this information, he hopes to better understand social characteristics of neighbourhoods such as income levels, educational attainment, or crime rates. Which type of research approach best describes this project?
 - a. objective
 - b. deductive
 - c. subjective
 - d. inductive
- 39. What specific ethical problem does the use of big data present?
 - a. Participants' information is not protected.
 - b. Participants likely have not consented to engaging in research.
 - c. Participants' identities may be revealed.

chapter 2

- d. There are no ethical concerns since the research is anonymous.
40. Imagine that a researcher wanted to better understand dominant expressions of women's gender and sexuality. Which research design would reflect an unobtrusive research approach?
- a. interviewing women
 - b. conducting an online survey
 - c. performing an experiment
 - d. reviewing women's magazines
41. You decide to study a new religious group that has bought the house next door by attending their meetings twice a week for a period of approximately eight to ten months. Which of the following decisions must you now make?
- a. whether to use a structured interview or a self-administered questionnaire
 - b. whether to let people know they are being studied
 - c. whether to randomly assign subjects or allow self-selection into the experimental and control groups
 - d. what available data should be included in the secondary analysis
42. Andrea is conducting a laboratory experiment on altruism. Which statement best describes a weakness in her approach?
- a. It is unreliable.
 - b. It is inaccurate.
 - c. It is unethical.
 - d. It is artificial.
43. Which example best represents an empirical approach to knowing?
- a. an individual seeks guidance from an imam
 - b. a student asks her teacher for an answer
 - c. a patient consults with his lawyer
 - d. a gardener records plant activity
44. Suppose a researcher is analyzing meanings or social relationships by interpreting the narratives of school children's journals. Which type of research models would be employed?
- a. qualitative research models
 - b. observational research models
 - c. quantitative research models
 - d. systemic research models
45. What was the main independent variable in Latané and Darley's experiment on helping in emergency situations?
- a. the time that elapsed from the start of the victim's seizure until the participant left the room to get help
 - b. the participant's level of altruism

chapter 2

- c. the number of other people the participant believed had also heard the victim's distress
 - d. the amount of medical training the participants had before joining the experiment
46. Which type of study attempts to determine *why* certain events occur?
- a. explanatory
 - b. informational
 - c. normative
 - d. descriptive
47. Which of the following could be described as a descriptive approach to studying health?
- a. the percentage of people who exercise daily
 - b. the relationship between social class and the likelihood of going to the gym
 - c. how often people eat kale
 - d. whether exercise is a cross-cultural phenomenon
48. The following sentence is an example of which concept? "Increased exposure to television causes a decrease in girls' self-esteem."
- a. variable
 - b. hypothesis
 - c. theory
 - d. definition
49. Which research approach values close contact with a group of participants and immersion in their culture?
- a. experiments
 - b. field research
 - c. secondary data analysis
 - d. surveys
50. In attempts to measure the relationship between religiosity and political affiliation, a recurring issue is whether church membership provides an accurate indicator of a person's religious beliefs. Which term does this concern relate to most directly?
- a. validity
 - b. reliability
 - c. predictability
 - d. variability
51. A recent experiment conducted by the dating site OKCupid investigated the effect of intentionally mismatching people. What type of research approach best represents this example?
- a. critical research project
 - b. experiment
 - c. ethnography
 - d. participant observation

chapter 2

52. Which term best describes research that takes the form of an in-depth, multifaceted investigation of a single event, person, or social grouping?
- qualitative inquiry
 - a case study
 - complete observation
 - field research
53. Sarah begins to act altruistically once she discovers her actions are under study. What phenomenon is Sarah exhibiting?
- predictability
 - reactivity
 - generalizability
 - validity
54. What does “ensuring anonymity” mean?
- The researcher is able to identify a given person’s responses but promises not to do so.
 - The research cannot match a given response with a given respondent.
 - The researcher refrains from collecting personal information about participants.
 - The researcher obtains written consent before collecting personal information.
55. What does “maintaining confidentiality” mean?
- The researcher is able to identify a given person’s responses but promises not to do so
 - The research cannot identify a given response with a given respondent
 - The researcher refrains from collecting personal information about participants
 - The researcher obtains written consent before collecting personal information
56. What is a characteristic of “critical research,” according to William Carroll?
- It should be objective.
 - It should be radical.
 - It should be timely.
 - It should be valid.
57. Which research method does NOT approach research with an aim to better understand participants’ perspective?
- experimental research
 - critical research
 - feminist research
 - field research

58. Researchers investigating responses to the aftermath of Hurricane Katrina found that reports in the media greatly exaggerated interpersonal violence and danger. What research method best reflects the approach they

chapter 2

used to make this conclusion?

- a. experiment
- b. secondary data analysis
- c. structured interviews
- d. unstructured interviews

59. According to the text, what does successful field research require?

- a. having sufficient funding to pay people for information
- b. cultivating good relationships with the community
- c. ensuring that government supports the research objectives
- d. working with other scholars established in the field

60. As parental income increases, so does the likelihood that a child will attend a postsecondary institution. Which term best describes “parental income” in that statement?

- a. an operator
- b. a variable
- c. a concept
- d. a stimulus

61. When Tenzin chooses the sample for his research, he wants to ensure that the sample is a miniature version of the Canadian population as a whole. What type of sample is Tenzin using?

- a. general sample
- b. representative sample
- c. random sample
- d. stratified sample

62. What is the primary role of research ethics?

- a. to ensure the data collected are valid
- b. to outline how objective information will be collected
- c. to protect research participants
- d. to help frame hypotheses

63. In the hypothesis “Among university students taking an Introduction to Sociology course, older students tend to score higher on multiple choice tests than younger students,” what term would we use to refer to “score higher on multiple choice tests”?

- a. independent variable
- b. dependent variable
- c. operational variable
- d. intervening variable

64. In the hypothesis “Among university students taking an Introduction to Sociology course, older students tend to score higher on multiple choice tests than younger students,” what term would we use to refer to age?

chapter 2

- a. independent variable
 - b. dependent variable
 - c. operational variable
 - d. intervening variable
65. In what approach does the researcher collect information or data and then generate theories from the analysis of those data?
- a. objective
 - b. deductive
 - c. subjective
 - d. inductive
66. Why is sociological research necessary?
- a. It allows us to confirm commonsense beliefs.
 - b. It offers a more informed understanding of human social interaction.
 - c. It provides validation for personal experiences.
 - d. It helps to outline causes of behaviour.
67. What is a disadvantage of self-administered questionnaire research?
- a. This type of research is expensive to administer.
 - b. Response rates may be low.
 - c. Participants cannot be guaranteed anonymity.
 - d. It can be difficult to find participants.
68. A recent experiment conducted by the dating site OKCupid investigated the effect of intentionally mismatching people. On what grounds would sociologists most likely oppose such research?
- a. Participants were being watched.
 - b. Participants' personal information was collected.
 - c. Participants were unwitting subjects.
 - d. Participants' behaviour was being manipulated.
69. Why are variables important?
- a. They generate qualitative data.
 - b. They provide descriptions of social life.
 - c. They determine the appropriate participants.
 - d. They outline how concepts can be measured.
70. Which researcher is likely to be working with 'big data'?
- a. one reviewing census information
 - b. one analyzing a family diary
 - c. one conducting interviews with a local motorcycle gang

chapter 2

- d. one performing experiments with university students
71. In the text, what was Russel Ogden's master's thesis on euthanasia used to demonstrate?
- How harm to participants must be weighed against the overall contribution of the study to the advancement of science
 - How lenient ethical principles were in relation to studies conducted in the 1970s compared to those in place today
 - How researchers sometimes violate the ethical principle of informed consent in order to carry out their research
 - How the ethical principle of confidentiality can come into conflict with the law
72. Suppose a researcher meets with the subjects of her study and asks each a series of questions. Which data collection method is she using?
- researcher-administered questionnaire
 - interview
 - structured survey
 - structured experiment
73. Suppose you and your classmates were asked an identical set of questions concerning your attitudes toward a discounted bus transit pass in an interview. In what type of research would you be participating?
- an experiment
 - a case study
 - secondary data analysis
 - a survey
74. Which term refers to the extent to which a study or research instrument accurately measures what it is supposed to measure?
- validity
 - reliability
 - predictability
 - variability
75. A researcher decides to research the culture of bodybuilders by joining this group. He begins a strict regimen of weightlifting, adheres to a strict diet, and even participates in some amateur competitions. What type of research is this?
- complete observation
 - participant observation
 - direct observation
 - member observation
76. What are scientists trying to achieve when they try to ensure that their biases and values do NOT affect their research?
- reliability

chapter 2

- b. objectivity
- c. verifiability
- d. subjectivity

77. Suppose a study researched government transcripts to establish what types of themes occur most frequently. Which term refers to this kind of research?

- a. field research
- b. content analysis
- c. participant observation
- d. ethnography

78. In a simple random sample, what condition must be present?

- a. The participants chosen accurately reflect the larger population.
- b. Systematic procedures are used to select research participants.
- c. Every member of the entire population has the same chance of being selected.
- d. The likelihood of being selected for the sample is unknown.

79. How do scientific explanations differ from the other ways of knowing?

- a. Science uses a normative approach.
- b. Scientific knowledge is systematic.
- c. Knowledge derived from scientific inquiry cannot be refuted.
- d. Science is subjective.

80. A team of researchers recently decided to conduct an experiment originally made famous by Stanley Milgram in the 1950s in order to test whether Milgram's results still hold today. Which term best describes their activities?

- a. replication
- b. authentication
- c. confirmation
- d. substantiation

81. Rajeev is participating in a study about gaming behaviour. As a result, Rajeev limits the amount of "trash talking" he engages in when playing. Which characteristic is Rajeev demonstrating?

- a. variation
- b. changeability
- c. reactivity
- d. feedback

82. What is a unique characteristic of the qualitative research process?

- a. It conceptualizes a problem.
- b. It includes a large number of cases.
- c. It collects quantitative data.

chapter 2

d. It responds to the question being investigated.

83. Which research method is useful for describing features of a large population without having to interview everyone?

- a. the natural experiment
- b. self-administered questionnaire
- c. content analysis
- d. participant observation

84. Cynthia examines documents and conducts studies for her research. According to the text, what research approach is Cynthia using?

- a. mixed
- b. inductive
- c. explanatory
- d. triangulated

85. Suppose your instructor is evaluating your class in terms of political attitudes. One at a time, half of your class is selected to participate in the study. You are not chosen. Which term best describes the group you are in?

- a. the sample
- b. the pool
- c. the population
- d. the aggregate

86. According to the text, which of the following is the greatest limitation of laboratory research?

- a. Laboratory experiments cannot be replicated.
- b. Laboratory research produces quantitative data.
- c. Laboratory experiments are artificial.
- d. Laboratory experiments are expensive.

87. In studies that look at why men have more experiences with organized sport than women, what type of variable describes the degree of involvement with organized sport?

- a. dependent variable
- b. independent variable
- c. correlational variable
- d. predictor variable

88. Which principle of feminist research is best reflected in the example of Bergen's research (1993) examining women's experiences of marital rape?

- a. Bergen's personal involvement was important.
- b. Bergen's personal involvement created new ethical problems.
- c. Bergen's personal involvement was frowned upon by other researchers.
- d. Bergen's personal involvement led her to terminate interviews.

chapter 2

89. What do sociologists try to understand?
- a. innate behaviour
 - b. psychological behaviour
 - c. social behaviour
 - d. individual behaviour
90. Which type of research project is likely to generate qualitative data?
- a. performing an experiment
 - b. delivering a survey
 - c. conducting an interview
 - d. reviewing census information
91. Why would a researcher choose to undertake a qualitative study?
- a. to test a hypothesis
 - b. to investigate a research question
 - c. to make conclusions about a population
 - d. to determine relationships between variables
92. Which term would sociologists use to refer to the process through which data are organized so that comparisons can be made and conclusions drawn?
- a. theory building
 - b. hypothesis construction
 - c. analysis
 - d. methodology
93. Which way of knowing is likely to have disagreements that *cannot* be resolved?
- a. empirical
 - b. religious
 - c. normative
 - d. commonsense
94. What occurs in an unstructured interview?
- a. The interviewer has a specific set of questions that must be asked.
 - b. The interviewer ignores new topics raised by interviewees.
 - c. The interviewer avoids using previous answers to direct new questions.
 - d. The interviewer establishes the general direction by asking open-ended questions.
95. Suppose researchers are studying the effect of watching pornographic films on men's attitudes toward women. Which group contains the subjects who are exposed to a pornographic film?
- a. the control group
 - b. the research group

chapter 2

- c. the interest group
- d. the experimental group

96. A researcher is working with a population of hospital patients to determine the outcome of a new program on happiness. When she disseminates the questionnaires, she specifically asks that respondents not put their names on the sheet. What is she protecting?

- a. confidentiality
- b. informed consent
- c. voluntariness
- d. anonymity

97. What main advantage do interviews have over other research designs?

- a. They provide participants an opportunity to give detailed responses.
- b. They are inexpensive to administer.
- c. They provide consistency between research participants.
- d. They generate the most objective data.

98. According to the text, what was the most interesting finding of Statistics Canada's study on charitable giving?

- a. A core group of Canadians did most of the altruistic activities of giving and volunteering.
- b. Most Canadians were heavily involved in altruistic activities of giving and volunteering.
- c. Older Canadians were less likely to donate than younger people.
- d. More people donated time than money.

99. Which characteristic does critical research share with experimental research?

- a. Both attempt to manipulate variables to determine the causes of phenomena.
- b. Both believe there are universal truths to be investigated.
- c. Both require researchers to test a hypothesis.
- d. These perspectives do not share key characteristics.

100. Suppose someone says that tall men are more assertive than short men. Which term best describes this statement?

- a. theory
- b. hypothesis
- c. variable
- d. empirical statement

101. What research focuses on data that can be measured numerically?

- a. quantitative
- b. qualitative
- c. inductive
- d. deductive

chapter 2

102. Why would researchers conduct research in the field?

- a. to test a hypothesis
- b. to generate objective information
- c. to obtain quantitative data
- d. to learn about a group in context

103. Researchers Christien Bruckert and Colette Parent conducted a project with sex workers in Montreal. One of their participants was Luka Magnotta, a man later convicted of the first degree murder of Lin Jun. What principle did the Court acknowledge as critical when it ruled that turning over their data to police would compromise the integrity of research?

- a. confidentiality
- b. informed consent
- c. voluntariness
- d. anonymity

104. What is a unique advantage of field research?

- a. Researchers can better empathize with their participants.
- b. Participants have the opportunity to share their opinions.
- c. The data collected are more objective.
- d. Researchers can validate previous studies more easily.

105. Age, sex, race, and ethnicity are often used as which type of variables in sociological research?

- a. dependent
- b. outcome
- c. operational
- d. independent

106. A young boy wonders if men or women are more likely to wear sandals with socks. He decides to watch everyone who is wearing sandals and record whether or not they are wearing socks and their gender. Which way of knowing the world is the boy engaged in?

- a. empirical
- b. normative
- c. relational
- d. commonsense

107. According to the text, what is one problem with the use of secondary analysis?

- a. The data are not readily available.
- b. The data may not reflect variables of interest to the researcher.
- c. The data are very expensive to obtain.
- d. The chance of bias on the part of the researcher is greatly increased.

chapter 2

108. Compared with experiments, field research allows research participants to share their own ideas and beliefs about the world. What does this mean for the data?

- a. It is more reliable.
- b. It is more complete.
- c. It is more effective.
- d. It is more valid.

109. How does triangulation benefit research?

- a. Researchers get more perspectives than they otherwise would because they work with several populations.
- b. Triangulated research projects are more current because they require a longer timeframe to complete.
- c. Data are collected in varied ways and provide richer information.
- d. It is unique because the data collected are both valid and reliable.

110. Which of the following examples best reflects the definition of a descriptive study as outlined by the text?

- a. an experiment that examines how alcohol consumption affects judgment
- b. a historical account of incidents that caused World War One
- c. a survey that investigates the relationship between sleep and academic performance
- d. an ethnography that details the lifestyles of motorcycle riders

111. In which research method does the researcher manipulate independent variables to investigate their impact on a dependent variable?

- a. survey research
- b. experiments
- c. observational studies
- d. secondary data analyses

112. Which kind of study would most likely be conducted by a sociologist seeking to determine why poverty rates endure among immigrants long after they have relocated to Canada?

- a. explanatory
- b. informational
- c. normative
- d. descriptive

113. What is the main reason that sociologists review previous research?

- a. to determine the best journals in which to publish their results
- b. to help refine the problem being investigated
- c. to identify faults in the work of other sociologists
- d. to decide on one or more of the research methods available for the research design

114. Which research method is best characterized as advancing “feminist” values, according to the textbook?

- a. Experiments

chapter 2

- b. Secondary data analysis
- c. Surveys
- d. Field research

115. Which group contains the participants who are NOT exposed to a pornographic film in the study investigating how such films affect men's attitudes toward women?

- a. the control group
- b. the research group
- c. the interest group
- d. the experimental group

116. Which parallel best represents the style of an unstructured interview?

- a. sharing your opinion on scale from 1 to 7
- b. responding to *yes* or *no* questions
- c. having a conversation
- d. ranking among favourite options

117. Laud Humphreys studied homosexual acts between strangers meeting in public restrooms. In the course of his research, which of the following can be raised as an ethical concern?

- a. He did not inform his subjects that they were being studied.
- b. He obtained their informed consent under duress.
- c. He broke the law by wearing disguises and following people home.
- d. He manipulated his research subjects.

118. What was the main dependent variable in Latané and Darley's experiment on helping in emergency situations?

- a. the participant's level of altruism
- b. the participant's medical background
- c. the group size
- d. the time that elapsed until the participant left to get help

119. According to the text, what is a major weakness of survey research?

- a. Respondents may be untruthful to save face.
- b. It can't be used to describe the characteristics of a large population.
- c. It can be used only to assess the importance of a few variables.
- d. It can be difficult to administer with some populations.

120. Which type of research would generate hypotheses and variables?

- a. surveys
- b. historical accounts
- c. ethnographies
- d. interviews

chapter 2

121. Which of the following reflects the traditional way of knowing the world?
- a. discovering for ourselves many of the things we know
 - b. relying on experts to tell us something is true
 - c. believing something is true and right because it has always been done that way
 - d. relying on religious scriptures to determine what is true
122. Which characteristic does a well-designed experimental research study possess?
- a. It makes clear causal connections between phenomena.
 - b. It offers a historical account of related phenomena.
 - c. It demonstrates relationships between phenomena.
 - d. It allows participants to provide insights about phenomena.
123. Which of the following best represents an operational definition?
- a. addiction
 - b. wealth
 - c. level of education
 - d. social status
124. A child who discovers that touching fire causes pain has learned through which form of knowledge?
- a. personal experience
 - b. tradition
 - c. religion
 - d. authority
125. Which term refers to the group of people about whom sociological researchers want to be able to draw conclusions?
- a. a sample
 - b. a collective
 - c. a population
 - d. an aggregate
126. Which of the following conditions would a study that has validity satisfy?
- a. It would accurately measure what it is supposed to measure.
 - b. It would provide ethical standards for researchers to follow.
 - c. It would provide predictability.
 - d. It would be a reliable study.
127. A researcher believes that individuals who report enjoying the work they do will have fewer absences. She decides to conduct a study in workplaces that involves comparing employee absenteeism with employee work satisfaction surveys. Which type of research approach best describes this project?
- a. objective

chapter 2

- b. deductive
- c. subjective
- d. inductive

128. Suppose you used a qualitative approach to study bullying. Which method would your research most likely use?

- a. laboratory experiments on bullying
- b. field observations of bullying in the schoolyard
- c. questionnaires administered to all bullies in the school
- d. secondary analysis of school reports on bullying

129. Nadine wants to set up her research in such a way that she can control as many outside factors as possible. Which type of research is Nadine most likely to conduct?

- a. a field study
- b. a longitudinal study
- c. a quantitative analysis
- d. a laboratory experiment

130. Which term refers to the extent to which a study or research instrument yields consistent results?

- a. validity
- b. reliability
- c. predictability
- d. variability

131. In what approach does the researcher begin with a theory and then use research to test the theory?

- a. objective
- b. deductive
- c. subjective
- d. inductive

132. Suppose a person receives the same score when he takes a self-esteem test more than once. Which concept does this best illustrate?

- a. validity
- b. predictability
- c. reliability
- d. dependability

133. According to the text, which research method is known to be both artificial in nature and subject to problems of reactivity?

- a. laboratory experiment
- b. survey research
- c. secondary analysis of existing data

chapter 2

d. participant observation

134. Describe the three tasks that define how to conduct an institutional ethnography.

135. Compare and contrast descriptive and explanatory studies. Provide examples.

136. Define the three ways in which critical research strategies can be used.

137. Explain the ethical issues that arise from conducting research using complete observation and participant observation.

138. Identify & briefly describe the characteristics of scientific knowledge.

139. Many researchers hope their investigatory instruments will be reliable and valid. Explain these concepts and provide an example.

140. Discuss how “cyberethnographies” are useful for studying virtual communities.

141. Outline the ethical issues raised by Laud Humphrey’s research. In your opinion, what aspects of the study were would be considered ethical by today’s standard and which would not be permissible?

142. Compare and contrast the quantitative and qualitative research models. Provide an example of a research study that uses each of these methods effectively.

143. Imagine that a researcher wanted to learn more about student life. Using two research methods, explain how he might do so.

144. Explain the strengths and weaknesses of using multiple methods or “triangulation.”

145. List and describe the five different ways of knowing the world. Be sure to explain how they differ from each other, and to outline which ways of knowing provide the most reliable information.

146. Researchers have long maintained that they should have the same protections as lawyers and doctors when it comes to protecting the identities and information of research participants. Outline the benefits and possible consequences that may result from extending the right to maintain confidentiality to researchers.

147. Using examples, outline several of the key ethical issues that sociologists face in conducting research.

148. Identify the main features of experiments and discuss the key strengths and weaknesses of using experimental methods.

149. Explain what is unique about feminist research methods and critical research methods.

134. Focus on ideology, work (in the broad sense), and social relations.

135. Descriptive: describe social reality or provide facts about some group, practice or event.
Explanatory: explain relationships and provide information on why certain events do or do not occur.
Examples will vary.

136. Oppositional, radical, subversive

137. Might point out whether the researcher should identify him/herself & get consent of participants and engaging in potentially dangerous or illegal activity

138. Empirical, systematic, public, possesses mechanisms for self-correction, & is objective

139. Reliability: instrument provides consistent results over time
Validity: the study or instrument accurately measures what it is supposed to
Examples will vary.

140. Enables researchers to explore how people construct online cultures based on their experiences in these simulated worlds.
